simple, inexpensive, and robust vehicle for basic utility chores. Its simple design proved to be adaptable to a host of military tasks including use as a scout vehicle, battlefield ambulance, communications vehicle, and staff car. This book, covering “the savior of World War II”, focuses on the design and development of this versatile vehicle used on nearly every front of World War II.

During WW2 the Willys MB and Ford GPW "jeep" were used over the entire world. Most of the time they were used as open vehicles. But in some extremely cold climates the jeep was equipped with heaters and full enclosures to protect the crew. This book covers the winterization gear used on the jeeps.

Designated as a light truck, the Jeep was the primary four-wheel drive vehicle for the U.S. Army during WWII.

The Jeep's design owed a great deal to Karl Probst, a freelance designer employed by the American Bantam Car Co. Probst's prototype "Blitz Buggy" was built in a mere 49 days. It clearly impressed the Army in head-to-head competition against a design submitted by Willys-Overland.

However the Buggy's engine failed to meet requirements, and the Army determined that Bantam could not produce the vehicle in quantity. As a result, the Army bought the Bantam design and asked both Willys and Ford to improve it. The Willys model MB, equipped with a L134 straight-4 "Go Devil" engine, was eventually accepted as the standard. Ford models built to Willys specifications

were designated GPW ("G" for government vehicle, "P" designating the 80" wheelbase, and "W" indicating the Willys engine design). (Notably, the "GP" part of the designation is often misinterpreted to mean "General Purpose," and some have suggested this is the reason the vehicle was nicknamed the "Jeep." In reality it was probably named after a character in the Popeye cartoons). Roughly 640,000 Jeeps were built during WWII by Ford and Willys, and used on every front. Utilitarian, rugged, and easy to maintain, Jeeps saw service as scout cars, ambulances, firefighting vehicles, as tractors for artillery, and more. The vehicle so impressed war correspondent Ernie Pyle that he called it one of the "two most important pieces of non-combat equipment ever developed" - the other being the
