Teaching Dialogue Interpreting is one of the very few book-length contributions that cross the research-to-training boundary in dialogue interpreting. The volume is innovative in at least three ways. First, it brings together experts working in areas as diverse as business interpreting, court interpreting, medical interpreting, and interpreting for the media, who represent a wide range of theoretical and methodological approaches. Second, it addresses instructors and course designers in higher education, but may also be used for refresher courses and/or retraining of in-service interpreters and bilingual staff. Third, and most important, it provides a set of resources, which, while research driven, are also readily usable in the classroom — either together or separately — depending on specific training needs and/or research interests. The collection thus makes a significant contribution in curriculum design for interpreter education.

Translation practice and workflows have witnessed significant changes during the last decade. New market demands to handle digital content as well as technological advances are leading this transition. The development and integration of machine translation systems have given post-editing practices a reason to be in the context of professional translation services. Translators may still work from a source text, but more often than not they are presented with already translated text involving different degrees of translation automation. This scenario radically changes the cognitive demands of translation. Technological development has inevitably influenced the translation research agenda as well. It has provided new means of penetrating deeper into the cognitive processes that make translation possible and has endorsed new concepts and theories to understand the translation process. Computational analysis of eye movements and keystroke behaviour provides us with new insights into translational reading, processes of literality, effects of directionality, similarities between inter- and intralingual translation, as well as the effects of post-editing on cognitive processes and on the quality of the final outcome. All of these themes are explored in-depth in the articles in this volume which presents new and valuable insights to anyone interested in what is currently happening in empirical, process-oriented translation research.

This well-known undergraduate electrodynamics textbook is now available in a more affordable printing from Cambridge University Press. The Fourth Edition provides a rigorous, yet clear and accessible treatment of the fundamentals of electromagnetic theory and offers a sound platform for explorations of related applications (AC circuits, antennas, transmission lines, plasmas, optics and more). Written keeping in mind the conceptual hurdles typically faced by undergraduate students, this textbook illustrates the theoretical steps with well-chosen examples and careful illustrations. It balances text and equations, allowing the physics to shine through without compromising the rigour of the math, and includes numerous problems, varying from straightforward to elaborate, so that students can be assigned some problems to build their confidence and others to stretch their minds. A Solutions Manual is available to instructors teaching from the book; access can be requested from the resources section at [www.cambridge.org/electrodynamics](http://www.cambridge.org/electrodynamics).
