An authoritative assessment of the reform efforts in African economies during the 1980s and early 1990s. The focus is on the reform process in the socialist countries which began from a position of pervasive state intervention. The impact of the subsequent economic liberalization and the changing role of the state during the period of transition is the focus of this theoretical overview, with particular coverage of macroeconomic management and the privatization of state enterprises. A companion volume (0-333-71237-4) contains in-depth country studies. These books are the first in an important new series in association with the Centre for the Study of African Economies, University of Oxford.

An authoritative assessment of the reform efforts in African economies during the 1980s and early 1990s, with the focus on economic liberalization in those socialist countries which began from a position of pervasive state intervention. A companion theoretical volume (0-333-66545-7) examines the changing role of the state during the period of transition. This volume examines the important debate on agricultural reforms in the period, and provides in-depth country studies of the transition economies, covering Congo, Madagascar, Tanzania and the impact of war on transition in Angola and Mozambique. These books are the first in an important new series in association with the Centre for the Study of African Economies, University of Oxford.

First published in 1998, this volume focuses on the special category of countries popularly referred to as 'transition economies' through an analysis of small and medium sized enterprises (SMEs) and their role in Asian economies, with a view to assessing whether they could or should provide a model for African countries. The present volume explores the institutional peculiarities displayed by 'transition economies'. These are economies which are undergoing a comprehensive and fundamental societal transformation with a view to creating a utopian communist society within the frame of a centrally administered economy, then a pluralistic society based on a market economy and the rule of law. Much of the debate on the economic performance of African LCD's has focused on informal sector activities or on the imperative to achieve structural adjustment. By highlighting instead the challenges facing two of the least successful among the African economies - Ethiopia and Tanzania, both of which share a socialist past - this book moves beyond the above issues. It argues that institutional adjustment is critical to the prospects for success in developing transition economies. As such the book investigates the transaction costs environment within which small-scale industrial activities are set. By drawing extensively on the Asian experience, (predominantly China and Vietnam but also India and Taiwan), it identifies sources of transaction costs by examining not only the transactional disadvantages of small-scale production, but also the past and present sources of institutional inefficiency.

This volume covers various issues in global development and global economic transformation including factors affecting economies and development in the European Union (EU), the Ukraine, select countries in Africa, the Caribbean, the South Pacific as well as India and the United States. The global economy is in transition, from the 1990s' status quo to the "new normal" with heavy reliance on the internet, rapid communications, sophisticated payment systems, diminishing importance of size and distance and changing notions of the market. This volume discusses how this process is affecting economies across the globe and why an appreciation of it will help efforts by governmental bodies and the private sector to reassess societal relationships - both economic and political. This volume shows that challenges to policy-making and the achievement of social consensus on development issues are often quite similar in all countries, irrespective of size, geographical location, endowment and developmental status. The chapters speak to concerns that touch on a cross-section of issues which are driving transition and transformation at multiple levels. As a group, they compare economic factors across transnational economic or political associations (OECD, European Union, G20) or make comparisons across or within emerging markets or small states (BRICS, various African countries, the Caribbean, South Pacific). They include the presentation of a new model for transnational agreements, discussions of policies related to labor compensation and corporate governance, comparisons of nations across the world using indices of economic development and governance, an analysis of gender inequality in employment in the European Union, comparisons of tax burdens across the European Union and the USA, discussions of employee representation in corporate governance, and a look at grass-roots development and markets in developing economies. As a whole, in its breadth and cross-national perspective, the volume represents an important scholarly contribution to international economics.

This volume describes African cities in transition, and the economic, socio-political, and environmental challenges resulting from rapid post-colonial urbanization. As the African continent continues to transition from urban configurations inherited from colonial influences and history, it faces issues such as urban slum expansion, increased demands for energy and clean water, lack of adequate public transportation, high levels of inequality among different socio-economic population strata, and inadequate urban governance, planning, and policies. African cities in transition need to reconsider current policies and developmental trajectories to facilitate and sustain economic growth and Africa's strategic repositioning in the world. Written by an international team of scholars and practitioners, this volume uses case studies to focus on key issues and developmental challenges in selected African cities. Topics include but are not limited to, smart cities, changing notions of democracy, the city's role in attaining the SDGs, local governance, alternative models for governance and management, corruption, urbanisation and future cities.

African American literature in the years between 1800 and 1830 emerged from significant transitions in the cultural, technological, and political circulation of ideas. Transformations included increased numbers of Black organizations, shifts in the physical mobility of Black peoples, expanded circulation of abolitionist and Black newsprint as well as greater production of Black authored texts and images. The perpetuation of slavery in the early American republic meant that many people of African descent conveyed experiences of bondage or promoted abolition in complex ways, relying on a diverse array of print and illustrative forms. Accordingly, this volume takes a thematic approach to African American literature from 1800 to 1830, exploring Black organizational life before 1830, movement and mobility in African American literature, and print culture in circulation, illustration, and the narrative form.
