Much is expected of
private financing to help

meet the infrastructure requirements of the rapidly growing East Asian economies.

Although private financing grew briskly during the 1990s, it represents only a small share of all infrastructure investment in the region (between 12 and 18 percent). This monograph draws on

experience in a number of countries in East Asia, as well as Australia, Chile, and India, to analyze the impediments to and prospects for private financing of infrastructure. The chapters discuss the choices available to policymakers and the strategies that governments have

followed. An overview chapter describes recent trends in international financing of infrastructure projects in the region, discusses the key policy and institutional impediments to greater private participation, and assesses the role of domestic capital markets and finance. It also outlines a national

and regional strategy for stimulating private investment in infrastructure. The case studies from countries outside East Asia illustrate the payoffs of increased integration and concerted moves toward private provision of infrastructure.

Through case studies of individual diseases and analyses of public awareness campaigns and institutional responses, later chapters provide important insights into the reasons why some illnesses receive more attention and funding than others."--Jacket.

After many decades of neglect, the last forty years have seen a renewed scholarly appreciation of the literary value of the Greek novel. Within this renaissance of interest, four monographs have been published to date which focus on individual novels; I refer to the specialist studies of Achilles Tatius by

Morales and Laplace and those of Chariton of Aphrodisias by Smith and Tilg. This book adds to this short list and takes as its singular focus Xenophon's Ephesiaca. Among the five fully extant Greek novels, the Ephesiaca occupies the position of being an anomaly, since scholars have conventionally

considered it to be either a poorly written text or an epitome of a more sophisticated lost original. This monograph challenges this view by arguing that the author of the Ephesiaca is a competent writer in artistic control of his text, insofar as his work has a coherent and emplotted focus on the

protagonists' progression in love and also includes references to earlier texts of the classical canon, not least Homer's *Odyssey* and the Platonic dialogues on Love. At the same time, the *Ephesiaca* exhibits stylistically an overall simplicity, contains many repetitions and engages with other texts via a

thematic, rather than a pointed, type of intertextuality; these and other features make this text different from the other extant Greek novels. This book explains this difference with the help of Couegnas' view of 'paraliterature,' a term that refers not to its status as 'non-literature' but rather to literature of

a different kind, that is simple, action-oriented, and entertaining. By offering a definition of the Ephesiaca as a paraliterary narrative, this monograph sheds new light on this novel and its position within the Greek novelistic corpus, whilst also offering a more nuanced understanding of intertextuality and

The availability of spatial databases and widespread use of geographic information systems has stimulated increasing interest in the analysis and modelling of spatial data. Spatial data analysis focuses on detecting patterns, and

Download File PDF Art Models

on exploring and modelling relationships between them in order to understand the processes responsible for their emergence. In this way, the role of space is emphasised , and our understanding of the working and representation of space, spatial patterns, and processes is enhanced. In applied research, the

recognition of the spatial dimension often yields different and more meaningful results and helps to avoid erroneous conclusions.

This book aims to provide an introduction into spatial data analysis to graduates interested in applied statistical research. The text has been structured from a data-driven rather than a

theory-based perspective, and focuses on those models, methods and techniques which are both accessible and of practical use for graduate students.

Exploratory techniques as well as more formal model-based approaches are presented, and both area data and origin-destination flow data are

Diverse driving forces, processes and actors are responsible for different trends in the development of megacities and large urban areas. Under the dynamics of global change, megacities are themselves changing:

Download File PDF Art Models

On the one hand they are prone to increasing socio-economic vulnerability due to pronounced poverty, socio-spatial and political fragmentation, sometimes with extreme forms of segregation, disparities and conflicts. On the other hand megacities offer positive potential for global transformation, e.g.

minimisation of space consumption, highly effective use of resources, efficient disaster prevention and health care options – if good strategies were developed. At present in many megacities and urban areas of the developing world and the emerging economies the quality of life is eroding. Most of the

Download File PDF Art Models

megacities have grown to unprecedented size, and the pace of urbanisation has far exceeded the growth of the necessary infrastructure and services. As a result, an increasing number of urban dwellers are left without access to basic amenities like clean drinking water, fresh air and safe food.

Additionally, social inequalities lead to subsequent and significant intra-urban health inequalities and unbalanced disease burdens that can trigger conflict and violence between subpopulations. The guiding idea of our book lies in a multi- and interdisciplinary approach to the complex topic of megacities and

urban health that can only be adequately understood when different disciplines share their knowledge and methodological tools to work together. We hope that the book will allow readers to deepen their understanding of the complex dynamics of urban and megacity populations through the
