Both prokaryotes and  
viruses are pathogens:  
they can cause disease.

A prokaryotes are living  
bacteria that use energy  
to reproduce and grow.

**Bacteria:** These single-celled organisms are prokaryotes. Bacteria are living things—they contain DNA, use nutrients and energy, grow and reproduce, and respond to their environment. **A virus:** is an infectious particle made only of a piece of DNA or RNA surrounded by a protein coat. **A viroid:** is a piece

of single-stranded RNA  
without a protein coat.  
Viroids cause diseases  
in plants, and are passed  
through seeds or pollen.

*Chapter 3&18 Cells,  
Viruses, & Prokaryotes  
- R.E.C.H.S ...*

Prokaryotes include  
several kinds of  
microorganisms, such as  
bacteria and  
cyanobacteria.

*Page 22/31*

Acces PDF

Biology

Eukaryotes include such microorganisms as fungi, protozoa, and simple algae. Viruses are considered neither prokaryotes nor eukaryotes because they lack the characteristics of living things, except the ability to replicate (which they accomplish only in living cells).
