In the movement toward standards-based education, an important question stands out: How will this reform affect the 10% of school-aged children who have disabilities and thus qualify for special education? In Educating One and All, an expert committee addresses how to reconcile common learning for all students with individualized education for "one"--the unique student. The book makes recommendations to states and communities that have adopted standards-based reform and that seek policies and practices to make reform consistent with the requirements of special education. The committee explores the ideas, implementation issues, and legislative initiatives behind the tradition of special education for people with disabilities. It investigates the policy and practice implications of the current reform movement toward high educational standards for all students. Educating One and All examines the curricula and expected outcomes of standards-based education and the educational experience of students with disabilities--and identifies points of alignment between the two areas. The volume documents the diverse population of students with disabilities and their school experiences. Because approaches to assessment and accountability are key to standards-based reforms, the committee analyzes how assessment systems currently address students with disabilities, including testing accommodations. The book addresses legal and resource implications, as well as parental participation in children's education.

Inclusive Education includes two sections: readings and cases. The readings present approaches for creating inclusive classrooms and schools; their purpose is to give prospective and practicing teachers background information in curricular, instructional, assessment, and collaborative problem-solving strategies that foster inclusive education. The Casebook consists of "An Introduction to Cases" and 14 teaching cases based on actual events as experienced by the case authors that describe in rich detail the experiences of parents, students, and teachers related to inclusive education. Most of the cases pose problems or dilemmas to be resolved--including the struggles of parents seeking inclusive education for their children; students' attempts to succeed in general education classrooms; special educators', principals' and teachers' experiences as they collaborate in moving toward inclusive programs; and teachers' concerns for the future success of their students.

Strategies for Students with Mild, Moderate, and Severe Intellectual Disabilities is a textbook for undergraduate and graduate students enrolled in special and general education teacher preparation programs (as well as practicing professionals) offering a solid, research based text on instructional methodologies for teaching students with intellectual disability across the spectrum of intellectual abilities. The book addresses both academic and functional curricula in addition to behavioral interventions. Additionally, Instructional Strategies for Students Mild, Moderate, and Severe Intellectual Disability adopts developmental or life span approach covering preschool through adolescence and young adulthood.

An essential handbook for educating students in the 21st century, since its initial publication A Principal's Guide to Special Education has provided guidance to school administrators seeking to meet the needs of students with disabilities. The third edition of this invaluable reference, updated in collaboration with and endorsed by the National Association of Elementary School Principals and the National Association of Secondary School Principals and incorporating the perspectives of both teachers and principals, addresses such current issues as teacher accountability and evaluation, instructional leadership, collaborative teaching and learning communities, discipline procedures for students with disabilities, and responding to students' special education needs within a standards-based environment.

In Teaching with Poverty in Mind: What Being Poor Does to Kids' Brains and What Schools Can Do About It, veteran educator and brain expert Eric Jensen takes an unflinching look at how poverty hurts children, families, and communities across the United States and demonstrates how schools can improve the academic achievement and life readiness of economically disadvantaged students. Jensen argues that although chronic exposure to poverty can result in detrimental changes to the brain, the brain's very ability to adapt from experience means that poor children can also experience emotional, social, and academic success. A brain that is susceptible to adverse environmental effects is equally susceptible to the positive effects of rich, balanced learning environments and caring relationships that build students' resilience, self-esteem, and character. Drawing from research, experience, and real school success stories, Teaching with Poverty in Mind reveals * What poverty is and how it affects students in school; * What drives change both at the macro level (within schools and districts) and at the micro level (inside a student's brain); * Effective strategies from those who have succeeded and ways to replicate those best practices at your own school; and * How to engage the resources necessary to make change happen. Too often, we talk about change while maintaining a culture of excuses. We can do better. Although no magic bullet can offset the grave challenges faced daily by disadvantaged children, this timely resource shines a spotlight on what matters most, providing an inspiring and practical guide for enriching the minds and lives of all your students.
