Framed as a personal exploration, Squarzoni details the issues involved, from the basic principles behind our climate models to the impact that climate change will have on the Earth and humanity; he also examines the well-funded effort to suppress constructive discussions about man ' s impact on the environment and evolutionary changes that have masked the effects of greenhouse gases.

What are the causes and consequences of climate change? When the scale is so big, can an individual make any difference? Documentary, diary, and masterwork graphic novel, this up-to-date look at our planet and how we live on it explains what global warming is all about. With the most complicated concepts made clear in a feat of investigative journalism by artist **Phillippe Squarzoni**,

Climate Changed weaves together scientific research, extensive interviews with experts, and a call for action. Weighing the potential of some solutions and the false promises of others, this groundbreaking work provides a realistic, balanced view of the magnitude of the crisis that **An Inconvenient Truth** only touched on. **Climate Changed** is printed on FSC-certified paper from responsibly-managed, environmentally-sound sources. A graphic novel offers an up-to-date look at our planet and how we live on it and explains what global warming is all about. Original.

A call to action from **Jane Fonda**, one of the most inspiring activists of our time, urging us to wake up to the looming disaster of climate change and equipping us with the tools we need to join her in protest In 2019, daunted by the looming disaster of climate change and inspired by **Greta Thunberg**, **Naomi Klein**, and student climate strikers, **Jane Fonda** asked herself one question: What can I do? **Jane Fonda**, one of the most influential activists of our time, moved to Washington, D.C., and has since led thousands of people in demonstrations on Capitol Hill. In launching **Fire Drill Fridays**, **Fonda** teamed up with **Greenpeace**, leading climate scientists, and community organizers not only to understand what ' s at stake, but to equip all of us with the education and tools we need to join her in protest. **What Can I Do?** isn ' t a wish list—it ' s a to-do list. So many of us recognize the urgency in stemming the tide of climate change but aren ' t sure where to start. Our window of opportunity to act is quickly closing. And it isn ' t only Earth ' s life-support systems that are unraveling, so too is our social fabric. This is going to take an all-out war on drilling, fracking, deregulation, racism, misogyny, colonialism, and despair—all at the same time. The problems we face now require every one of us to join the fight for not only our immediate future, but for the future of generations to come. 100% of the author ' s net proceeds from **What Can I Do?** have gone to **Greenpeace**

An idealistic twenty-something environmentalist. A retired right-wing finance minister. All their lives, they've happily ignored each other. Until now. **Anna Rose**, environmental crusader since the age of fourteen and co-founder of the **Australian Youth Climate Coalition**, is on a mission. This is the story of her biggest challenge yet: a whirlwind journey around the world with conservative powerbroker and arch climate sceptic **Nick Minchin**. From a remote Hawaiian volcano to a cosmic ray laboratory in Geneva, **Anna** rolls out the biggest names in science to try and change **Nick**' s mind. It's a journey to tell the story of what's happening to our climate—not just to one man, but to a nation divided on the biggest issue of our times. **Nick** and **Anna** challenge each other's views, provoking each other to confront closely held assumptions and question our responsibilities as citizens living in uncertain times.

How do we find courage when climate change overwhelms us emotionally? In this magical, often funny and deeply moving personal story, award-winning science reporter **Jonica Newby** explores how to navigate the emotional turmoil of climate change. After researching what global warming will do to the snow country she loves, **Newby** plummeted into a state of profound climate grief.

And if she was struggling, she wondered, how was everyone else coping? What should parents tell their anxious kids? How might we all live our best lives under the weight of this fearsome knowledge? Then reality outstripped imagination as her family was swept up in the apocalyptic 2020 fires. Featuring illuminating conversations with singer–songwriter **Missy Higgins**, comedians **Charlie Pickering** and **Craig Recussel** and business leader **Mike Cannon-Brookes**, practical advice from psychological and scientific experts, incredible accounts from everyday heroes, plus inspiring stories from the climate strike kids.**Beyond Climate Grief** provides guidance and emotional sustenance to help shore up courage for the uncertainties ahead. It reminds us of the love, beauty and wonder in the world, even amidst disaster. And how we all have a touch of epic hero in us. ' **How do we talk about the things we can ' t bear to think about?** **Jonica Newby** finds a way with warmth, humour, honesty and stunning writing. An extraordinary book. ' — **Charlie Pickering** ' **Brilliantly researched, intensely personal and raw, this is the book we all need right now.** ' — **Jane Caro**

Life on 1/10th the fossil fuels turns out to be awesome. We all want to be happy. Yet as we consume ever more in a frantic bid for happiness, global warming worsens. Alarmed by drastic changes now occurring in the Earth's climate systems, the author, a climate scientist and suburban father of two, embarked on a journey to change his life and the world. He began by bicycling, growing

food, meditating, and making other simple, fulfilling changes. Ultimately, he slashed his climate impact to under a tenth of the US average and became happier in the process. **Being the Change** explores the connections between our individual daily actions and our collective predicament. It merges science, spirituality, and practical action to develop a satisfying and appropriate response to global warming. Part one exposes our interconnected predicament: overpopulation, global warming, industrial agriculture, growth-addicted economics, a sold-out political system, and a mindset of separation from nature. It also includes a readable but authoritative overview of climate science. Part two offers a response at once obvious and unprecedented: mindfully opting out of this broken system and aligning our daily lives with the biosphere. The core message is deeply optimistic: living without fossil fuels is not only possible, it can be better. **Peter Kalmus** is an atmospheric scientist at **Catech / Jet Propulsion Laboratory** with a Ph.D. in physics from **Columbia University**. He lives in suburban **Altadena, California** with his wife and two children on 1/10th the fossil fuels of the average American. **Peter** speaks purely on his own behalf, not on behalf of **NASA** or **Jet Propulsion Laboratory**.

With its soaring azure sky and stark landscapes, the **American Southwest** is one of the most hauntingly beautiful regions on earth. Yet staggering population growth, combined with the intensifying effects of climate change, is driving the oasis-based society close to the brink of a **Dust-Bowl-scale catastrophe**. In **A Great Aridness**, **William deBuys** paints a compelling picture of what the

**Southwest** might look like when the heat turns up and the water runs out. This semi-arid land, vulnerable to water shortages, rising temperatures, wildfires, and a host of other environmental challenges, is poised to bear the heaviest consequences of global environmental change in the United States. Examining interrelated factors such as vanishing wildlife, forest die backs, and the over-allocation of the already stressed **Colorado River**--upon which nearly 30 million people depend--the author narrates the landscape's history--and future. He tells the inspiring stories of the climatologists and others who are helping untangle the complex, interlocking causes and effects of global warming. And while the fate of this region may seem at first blush to be of merely local interest, what happens in the **Southwest**, **deBuys** suggests, will provide a glimpse of what other mid-latitude arid lands worldwide--the **Mediterranean Basin**, southern **Africa**, and the **Middle East**--will experience in the coming years. Written with an elegance that recalls the prose of **John McPhee** and **Wallace Stegner**, **A Great Aridness** offers an unflinching look at the dramatic effects of climate change occurring right now in our own backyard.

Climate Change and the Course of Global History presents the first global study by a historian to fully integrate the earth-system approach of the new climate science with the material history of humanity. Part I argues that geological, environmental, and climatic history explain the pattern and pace of biological and human evolution. Part II explores the environmental circumstances of the

rise of agriculture and the state in the Early and Mid-Holocene, and presents an analysis of human health from the Paleolithic through the rise of the state, including the Neolithic Demographic Transition. Part III introduces the problem of economic growth and examines the human condition in the Late Holocene from the Bronze Age through the Black Death, assessing the relationships among human technologies, climatic change, and epidemic disease. Part IV explores the move to modernity, stressing the emerging role of human economic and energy systems as earth-system agents in the Anthropocene. Supported by climatic, demographic, and economic data with forty-nine figures and tables custom-made for this book, **A Rough Journey** provides a pathbreaking model for historians of the environment, the world, and science, among many others.

**Barret Baumgart ' s** literary debut presents a haunting and deeply personal portrait of civilization poised at the precipice, a picture of humanity caught between its deepest past and darkest future. In the fall of 2013, during the height of **California ' s** historic drought, **Baumgart** toured the remote military base, **NAWS China Lake**, near **Death Valley, California**. His mother, the survivor of a recent stroke, decided to come along for the ride. She hoped the alleged healing power of the base ' s ancient Native American hot springs might cure her crippling headaches. **Baumgart** sought to debunk claims that the military was spraying the atmosphere with toxic chemicals to control the weather. What follows is a discovery that threatens to sever not only the bonds between mother

and son but between planet Earth and life itself. Stalking the fringes of Internet conspiracy, speculative science, and contemporary archaeology, **Baumgart** weaves memoir, military history, and investigative journalism in a dizzying journey that carries him from the cornfields of Iowa to drought-riddled **California**, from the **Vietnam** jungle to the caves of prehistoric Europe and eventually the walls of the **US Capitol**, the sparkling white hallways of the **Pentagon**, and straight into the contradicted heart of a worldwide climate emergency.

**Franny Stone** has always been the kind of woman who is able to love but unable to stay. Leaving behind everything but her research gear, she arrives in **Greenland** with a singular purpose: to follow the last Arctic terns in the world on what might be their final migration to Antarctica. **Franny** talks her way onto a fishing boat, and she and the crew set sail, traveling ever further from shore and safety. But as **Franny ' s** history begins to unspool—a passionate love affair, an absent family, a devastating crime—it becomes clear that she is chasing more than just the birds. When **Franny**' s dark secrets catch up with her, how much is she willing to risk for one more chance at redemption? Epic and intimate, heartbreaking and galvanizing, **Charlotte McConaghy**' s **Migrations** is an ode to a disappearing world and a breathtaking page-turner about the possibility of hope against all odds.
