high dose antipsychotic prescribing | Evidence search | NICE
BACKGROUND: Clinical guidelines recommend the routine use of a single antipsychotic drug in a standard dose, but prescriptions for high-dose and combined antipsychotics are common in clinical practice.

High dose and combination antipsychotic prescribing in ---
This chapter covers ethical issues requiring consideration when prescribing antipsychotic medications, with particular focus on prescribing that involves high-dose antipsychotics or polypharmacy. Prescription of antipsychotic medication currently holds a central place in the treatment of many with psychiatric disorders and it at times tends to dominate much of what psychiatrists do—certainly within secure settings where a major arm of the treatment options comprises use of these agents.

Ethical Issues Arising from the Prescription of ---
Over half of the patients on SLAM inpatient or psychiatric intensive care units were prescribed a high-dose antipsychotic or a combination of antipsychotics. Prescribing high-dose antipsychotics and polypharmacy in SLAM was found to be among the highest in the UK.

Reducing the rates of prescribing high dose antipsychotics ---
Aim and method: To review antipsychotic prescribing practice using selected recommendations from the 2006 Royal College of Psychiatrists ’ (RCPsych) consensus statement on the use of high dose antipsychotic medication.A clinical audit of antipsychotic prescribing for patients from two periods, February to October 2005 and February to October 2006, who were discharged from Hollywell PICU at ...
