Core Topics in Neuroanesthesia and Neurointensive Care is a recommendable book that tackles a fascinatingly vast interdisciplinary field. The editors Basil F. Matta, David K. Menon, and Martin Smith managed to gather an impressive list of authors that reads like a selection of the who's who within both fields (ie, neuroanesthesia and neurointensive care) in the United Kingdom, some other European countries, and the United States.

Core Topics in Neuroanesthesia and Neurointensive Care ...

This chapter describes the tests that are most widely used for monitoring during neuroanaesthesia and neurocritical care, specifically, EEG, somatosensory evoked potentials (SSEPs), brainstem auditory evoked potentials, motor evoked potentials (MEPs) and electromyography (EMG). The main indications for EEG are in the diagnosis and management of epilepsy, sleep studies and neuromonitoring.

Since the publication of the first edition of Core Topics in Cardiac Anesthesia, the clinical landscape has undergone significant change. Recent developments include the increased use of electrophysiology, the resurgence of primary percutaneous intervention in acute coronary syndromes, the use of percutaneous devices in patients previously considered inoperable, and the withdrawal of aprotinin.
