Crested geckos are arboreal, meaning that they like climbing trees and shrubs in their natural environment. Crested geckos have sticky pads on their toes which allows them to climb smooth surfaces, including glass. Crested geckos are nocturnal and spend their time during the day in cover, being mostly inactive and hiding. Adult size: • A fully-grown crested gecko can be 8 inches (20 cm) to 10 inches (25 cm) long.

Six Ways To Tell A Crested Gecko Is A Male Or Female. One of the first things to consider when buying a crested gecko is to know its sex. Knowing whether your crested gecko is male or female will determine how the tank will be peaceful and the name to give your pet. It is hard to determine the sex of your crested gecko by watching them scurrying around in the tank.Although you can keep female crested geckos together, you cannot keep two or more male cresties together as they can be aggressive.

Crested Geckos are native to southern New Caledonia, an island chain just east of Australia, and their name comes the small projections on their head and top of their eyes, which also earned them the nickname "Eyelash Geckos." "Crested Geckos have since become unavailable for export, but this hardy and rewarding species has become so successful in captivity that they are one of the most widely kept geckos today."

The crested gecko or eyelash gecko is a species of gecko native to southern New Caledonia. In 1866, the crested gecko was described by a French zoologist named Alphone Guichenot. This species was thought extinct until it was rediscovered in 1994 during an expedition led by Robert Seipp. Along with several Rhacodactylus species, it is being considered for protected status by the Convention on the International Trade in Endangered Species of Wild Flora and Fauna. It is popular in the pet trade.
