The Earth and Moon orbit around the Sun, which is a star sitting in the centre of our Solar System. The Sun provides the light and heat that we have during the daytime, it is the energy it provides which keeps all things on Earth alive. The Sun is massive, and over a million Earth's could fit inside it!

~~Earth, Moon, and Sun – An Orbit Refresher – YouTube~~

It takes the Earth one year, or 365 1/4 days, to completely orbit the Sun. As the Earth orbits the Sun, the Moon orbits the Earth. The Moon ' s orbit lasts 27 1/2 days, but because the Earth keeps moving, it takes the Moon two extra days, 29 1/2, to come back to the same place in our sky. The greatest picture ever taken of the Moon and the Earth: Apollo 8, the first manned mission to the moon, entered lunar orbit on Christmas Eve, Dec. 24, 1968. That evening, the astronauts-Commander Frank ...

Sun-Earth-Moon – interactive simulations – eduMedia. The motions of the Moon around the Earth and of the Earth around the Sun are complex. The motions involved in revolutions are superimposed on the movements involved in rotations. The Earth and the Moon both turn on their own axis (rotation), but both also move around another object (revolution). The rotation of the Earth (24 hours) explains the alternation of day and night.
