Developing Leadership Talent is an essential tool for any leadership program.

Behavior modeling has been a highly successful training method for centuries. However, refinements based upon extensive research about its components began only recently. This manual presents the fruits of this research, and provides hands-on, proven, detailed instructions for productive implementation. It is designed to be used in conjunction with BEHAVIOR MODELING TRAINING FOR DEVELOPING SUPERVISORY SKILLS: TRAINEE MANUAL by the same author, which contains multiple copies of various forms that the trainee will use.

Assessment Centers and Managerial Performance presents the historical development of multiple assessment procedures with focus on those advances relevant to assessment centers. This book discusses the models of job analysis, the nature of managerial work, work-sampling assessment methods, and the process of human judgment based on the assessment center experience. Organized into 11 chapters, this book begins with an overview of the various methods to describe, evaluate, and predict management effectiveness. This text then describes a number of assessment programs, including the earliest assessment centers. Other chapters consider the five approaches to predicting managerial effectiveness, including psychometric testing, clinical evaluations by psychologists, supervisor's ratings of potentials background interviews, and assessment centers. This book discusses as well the three levels of managerial jobs, namely, supervisory, middle management, and executive. The final chapter deals with the development of standards for assessment center operations. This book is a valuable resource for psychologists.

Individual Assessment is a professional practice important to Human Resource Managers, Executives and anyone making decisions about employees. Finally, we now have a clear, practical guide with methodologically-grounded descriptions of how to successfully do it. The authors have put together a unique new book with the following key features: *case studies and applied examples showing "how to" conduct individual assessment; *the book provides the reader with a conceptual structure and the research and literature supporting the process; and * it can be used as a text or supplemental text in courses on Personnel Selection, Assessment, Human Resources and Testing. This book will take Individual Assessment to an entirely new level of understanding and practice, and into a new era of professional research and activity.

In recent years, there has been growing interest in industrial systems, especially in robotic manipulators and mobile robot systems. As the cost of robots goes down and become more compact, the number of industrial applications of robotic systems increases. Moreover, there is need to design industrial systems with intelligence, autonomous decision making capabilities, and self-diagnosing properties. Intelligent Industrial Systems: Modeling, Automation and Adaptive Behavior analyzes current trends in industrial systems design, such as intelligent, industrial, and mobile robotics, complex electromechanical systems, fault diagnosis and avoidance of critical conditions, optimization, and adaptive behavior. This book discusses examples from major areas of research for engineers and researchers, providing an extensive background on robotics and industrial systems with intelligence, autonomy, and adaptive behavior giving emphasis to industrial systems design.
