Communication from the brain is sent to the rest of the body by the endocrine system as well as by the nervous system.

The endocrine system is a series of glands throughout the body that secrete chemicals (hormones) into the bloodstream;

hormones, in turn, affect body functions.

The endocrine glands, their locations, and their major functions are given in Table 1.

Guides

The human endocrine system modulates several processes of the body by the function of hormones. The endocrine system secretes hormones that control how bodily functions work. Thus, the human endocrine system watches over and coordinates all the systems of the body with the use of hormones.

Human Endocrine System

Use this simple Q& A page over the endocrine system to test your knowledge and prepare for upcoming tests. Feel free to print, copy, share, and use this study guide in any way! Remember: Adrenal HYPO function = Addisons: Adrenal HYPER function=Cushings: Thyroid HYPER function=Graves. The biggest tip I can give with learning endocrine D/Os is to focus on the pituitary hormones.
