Machig Labdron is popularly considered to be both a dakini and a deity, an emanation of Yum Chenmo, or Prajnaparamita, the embodiment of the wisdom of the buddhas. Historically, this Tibetan woman, a contemporary of Milarepa, was an adept and outstanding teacher, a mother, and a founder of a unique transmission lineage known as the Chöd of Mahamudra. This translation of the most famous biography of Machig Labdron, founder of the unique Mahamudra Chöd tradition, is presented together with a comprehensive overview of Chöd's historical and doctrinal origins in Indian Buddhism and its subsequent transmission to Tibet. Chöd refers to cutting through the grasping at a self and its attendant emotional afflictions. Most famous for its teaching on transforming the aggregates into an offering of food for demons as a compassionate act of self-sacrifice, Chöd aims to free the mind from all fear and to arouse realization of its true nature, primordially clear bliss and emptiness.

An examination of the fierce disputes that arose in Britain in the decades around 1900 concerning patents for electrical power and telecommunications. Late nineteenth-century Britain saw an extraordinary surge in patent disputes over the new technologies of electrical power, lighting, telephony, and radio. These battles played out in the twin tribunals of the courtroom and the press. In *Patently Contestable*, Stathis Arapostathis and Graeme Gooday examine how Britain's patent laws and associated cultures changed from the 1870s to the 1920s. They consider how patent rights came to be so widely disputed and how the identification of apparently solo heroic inventors was the contingent outcome of patent litigation. Furthermore, they point out potential parallels between the British experience of allegedly patentee-friendly legislation introduced in 1883 and a similar potentially empowering shift in American patent policy in 2011. After explaining the trajectory of an invention from laboratory to Patent Office to the court and the key role of patent agents, Arapostathis and Gooday offer four case studies of patent-centered disputes in Britain. These include the mostly unsuccessful claims against the UK alliance of Alexander Graham Bell and Thomas Edison in telephony; publicly disputed patents for technologies for the generation and distribution of electric power; challenges to Marconi's patenting of wireless telegraphy as an appropriation of public knowledge; and the emergence of patent pools to control the market in incandescent light bulbs.

Social Security is in jeopardy, private pension systems have fallen apart, and workers are trying to save on their own for retirement with the stock market in the worst shape since the Great Depression. In *The Predictable Surprise*, Sylvester J. Schieber shows that forewarnings of the coming retirement crisis have been apparent for decades, but we have never mustered the political will to address the problem. This book explains how we have gotten into the retirement predicament and where we can go from here. Schieber, a renowned authority on this topic, provides a compact, insightful history of Social Security, pension plans, and other retirement options, highlighting both their original justifications and the point when things began to go wrong. He brings his discussion right up to the present morass and concludes with suggestions as to how we can reform our retirement system. Our situation is not hopeless, Schieber concludes, if we take on some of these issues and resolve them. If we do not, we will severely jeopardize the prosperity of younger generations.

In this poignant and heart wrenching true story, Regina Louise recounts her childhood search for connection in the face of abuse, neglect, and rejection. What happens to a child when her own parents reject her and sit idly by as others abuse her? In this poignant, heart wrenching debut work, Regina Louise recounts her childhood search for someone to feel connected to. A mother she has never known--but long fantasized about-- deposited her and her half sister at the same group home that she herself fled years before. When another resident beats Regina so badly that she can barely move, she

knows that she must leave this terrible place—the only home she knows. Thus begins Regina's fight to survive, utterly alone at the age of 10. A stint living with her mother and her abusive boyfriend is followed by a stay with her father's lily white wife and daughters, who ignore her before turning to abuse and ultimately kicking her out of the house. Regina then tries everything in her search for someone to care for her and to care about, from taking herself to jail to escaping countless foster homes to be near her beloved counselor. Written in her distinctive and unique voice, Regina's story offers an in-depth look at the life of a child who no one wanted. From her initial flight to her eventual discovery of love, your heart will go out to Regina's younger self, and you'll cheer her on as she struggles to be Somebody's Someone.

This book covers technical fundamentals, complexity and social networks, and communication and language. It raises readers' interest in social networks, the importance of language in the emergence and maintenance of networks, the integral patterns of interconnectivity, and the means to measure and model social structure. It presents a broad range of ideas from several fields of research endeavor. It also explores social networks and their integration with communication and language, thereby providing a discussion of relevant theory, modeling, metrics, and application to business, natural resource management, and technology.

In *Teaching English Language Learners through Technology*, the authors explore the use of computers/technology as a pedagogical tool to aid in the appropriate instruction of ELLs across all content areas. The special focus of this book is on the informed use of various technologies and software programs that can specifically aid ELLs. Strategies are also provided for varying levels of access—whether teachers teach in a one computer classroom, have access to multiple computers, or have the ability to go into a computer lab at their school. A fully annotated list of web and print resources completes the volume, making this a valuable reference to help teachers harness the power of computer-assisted technologies in meeting the challenges of including all learners in effective instruction.

*Clinical Pain Management* takes a practical, interdisciplinary approach to the assessment and management of pain. Concise template chapters serve as a quick reference to physicians, anesthesiologists and neurologists, as well as other specialists, generalists, and trainees managing pain. Based on the International Association for the Study of Pain's clinical curriculum on the topic, this reference provides to-the-point best-practice guidance in an easy-to-follow layout including tables, bullets, algorithms and guidelines.

Dr Siri Paiboun, reluctant national coroner of the People's Democratic Republic of Laos, is summoned to a remote location in the mountains of Huaphan Province, where for years the leaders of the current government had hidden out in caves, waiting to assume power. Now, as a major celebration of the new regime is scheduled to take place, an arm is found protruding from the concrete walk that had been laid from the President's former cave hideout to his new house beneath the cliffs. Dr Siri is ordered to supervise the disinterment of the body attached to the arm, identify the corpse, and discover how he died. From the Hardcover edition.
