Kissing Architecture explores the mutual attraction between architecture and other forms of contemporary art. In this fresh, insightful, and beautifully illustrated book, renowned architectural critic and scholar Sylvia Lavin develops the concept of "kissing" to describe the growing intimacy between architecture and new types of art--particularly multimedia installations that take place in and on the surfaces of buildings--and to capture the sensual charge that is being designed and built into architectural surfaces and interior spaces today. Initiating readers into the guilty pleasures of architecture that abandons the narrow focus on function, Lavin looks at recent work by Pipilotti Rist, Doug Aitken, the firm Diller Scofidio + Renfro, and others who choose instead to embrace the viewer in powerful affects and visual and sensory atmospheres. Kissing Architecture is the first book in a cutting-edge new series of short, focused arguments written by leading critics, historians, theorists, and practitioners from the world of urban development and contemporary architecture and design. These books are intended to spark vigorous debate. They stake out the positions that will help shape the architecture and urbanism of tomorrow. Addressing one of the most spectacular and significant developments in the current cultural

techniques for practicing based on listening, and more. The companion CD contains 12 lessons in the book, from stringing and tuning the guitar to playing the blues scale in all positions and keys.

Currently, individuals interested in seeking an in-depth discussion of transplantation immunology must seek individual articles published in several journals, or extrapolate information from various non-transplant immunology textbooks. The purpose of this text is to provide the reader with a single source of information for the basic science of immunobiology of organ transplantation. It is unique that it focuses on immunobiology from the basic research side, with an emphasis on the cellular and molecular levels. The readers will be physicians, scientists, and graduate students interested and engaged in the study of immunology as it relates to allo- and xenotransplantation. This book is designed to be the reference standard for the immunobiology of transplantation.

ADHD is the most commonly diagnosed childhood behavioral disorder. Moreover, many students receiving special education assistance are reported to have ADHD. Children with ADHD may experience significant school adjustment difficulties and achievement problems. Problem behaviors associated with attention deficits and hyperactivity often

have a negative impact on the classroom, and, therefore, may compromise the learning environment for many, if not all, students. There is a critical need for school professionals to identify, assess, and treat students with ADHD. Identifying, Assessing, and Treating ADHD at School brings science to practice, providing school professionals invaluable information to meet the needs of children with ADHD. This volume, designed as a practical, easy-to-use reference for school psychologists and other mental health and educational professionals: Explains why school psychologists and their colleagues need to be prepared and able to identify and serve students with ADHD. Identifies the prevalence, influences, and associated conditions. Provides a review of screening, referral, and diagnostic assessment processes. Offers guidance on conducting psychoeducational assessments. Reviews evidence-based treatments. Offers practical guidance on setting up programs that address individual and classroom issues. School psychologists and other education and mental health professionals will find Identifying, Assessing, and Treating ADHD at School an exceptional resource in working to enhance the mental health and academic development of students.

Inelastic Analysis of Solids and Structures presents in a unified manner the physical and theoretical background of inelastic material models and computational methods, and illustrates the behavior of the models in typical engineering conditions. The book describes experimental observations and principles of mechanics, and efficient computational algorithms for stress calculations as typically performed in finite element analysis. The theoretical background is given to an extent necessary to describe the commonly employed material models in metal isotropic and orthotropic plasticity, thermoplasticity and viscoplasticity, and the plasticity of geological materials. The computational algorithms are developed in a unified manner with some detailed derivations of the algorithmic relations. Many solved examples are presented, which are designed to give insight into the material behavior in various engineering conditions, and to demonstrate the application of the computational algorithms.
