Alcohol. In 2014, a minority of adults, (15 per cent of men and 21 per cent of women), did not drink alcohol. The majority, 63 per cent of men and 62 per cent of women, drank at levels considered to be at lower risk of alcohol-related harm: that is 21 units or less per week for men and 14 units or less for women. 22 per cent of men and 16 per cent of women drank more than this.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

3,800+ Holidays, Promotions, Events for 2014 in the United States, United Kingdom, Canadian, Australian and Chinese Markets. The 2014 LEEP features over 3,800 dates in over 53 categories arranged alphabetically (with source URLs), chronologically and by length. This calendar of holidays and events for 2014 includes National, Promotional, Industry and International Events, Federal Holidays, Major Sporting Events and industry specific promotions. The LEEP Calendar is the invaluable time-saving, idea generating, revenue building business reference tool that provides exceptional marketers, publishers and journalists a quantifiable critical advantage over the competition. Created by a marketing and publishing industry veteran for: Advertising Executives Authors Bloggers Business Networkers Business Owners Editors Educators Event Planners Journalists Marketing Executives Media Planners Media Sales Reps Promotional Products Retailers Public Relations Publicists Publishers Retail Executives Sales Executives Social Media Marketers and anyone who is curious!

This book helps simplify the complexities of insurance entity regulatory compliance. Whether performing audit engagements or management at an insurance entity, the 2018 edition of this guide is a must-have resource to keep abreast of recent regulatory changes related to the life and health insurance industry, its products and regulatory issues, and the related transaction cycles that an insurance entity is involved with. New to the 2018 edition: This edition covers recent regulatory updates related to the Affordable Care Act and provides guidance for new standards that impact life and health insurance, including revenue recognition, financial instruments, leases, and more.

This book provides a collection of comprehensive research articles on data analytics and applications of wearable devices in healthcare. This Special Issue presents 28 research studies from 137 authors representing 37 institutions from 19 countries. To facilitate the understanding of the research articles, we have organized the book to show various aspects covered in this field, such as eHealth, technology-integrated research, prediction models, rehabilitation studies, prototype systems, community health studies, ergonomics design systems, technology acceptance model evaluation studies, telemonitoring systems, warning systems, application of sensors in sports studies, clinical systems, feasibility studies, geographical location based systems, tracking systems, observational studies, risk assessment studies, human activity recognition systems, impact measurement systems, and a systematic review. We would like to take this opportunity to invite high quality research articles for our next Special Issue entitled "Digital Health and Smart Sensors for Better Management of Cancer and Chronic Diseases" as a part of Sensors journal.

This book constitutes the thoroughly refereed post-conference proceedings of the 12th International Conference on Smart Homes and Health Telematics, ICOST 2014, held in Denver, CO, USA in June 2014. The 21 revised full papers presented together with three keynote papers and 9 short papers were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on Design and Usability, assistive and sentient environments, cognitive technology, activity recognition, context and situation awareness, Health IT and short contributions.

Biosensors and systems in the form of wearables and "nearables" (i.e., everyday sensorized objects with transmitting capabilities such as smartphones) are rapidly evolving for use in healthcare. Unlike conventional approaches, these technologies can enable seamless or on-demand physiological monitoring, anytime and anywhere. Such monitoring can help transform healthcare from the current reactive, one-size-fits-all, hospital-centered approach into a future proactive, personalized, decentralized structure. Wearable and nearable biosensors and systems have been made possible through integrated innovations in sensor design, electronics, data transmission, power management, and signal processing. Although much progress has been made in this field, many open challenges for the scientific community remain, especially for those applications requiring high accuracy. This book contains the 12 papers that constituted a recent Special Issue of Sensors sharing the same title. The aim of the initiative was to provide a collection of state-of-the-art investigations on wearables and nearables, in order to stimulate technological advances and the use of the technology to benefit healthcare. The topics covered by the book offer both depth and breadth pertaining to wearable and nearable technology. They include new biosensors and data transmission techniques, studies on accelerometers, signal processing, and cardiovascular monitoring, clinical applications, and validation of commercial devices.

This book reviews existing sensor technologies that are now being coupled with computational intelligence for the remote monitoring of physical activity and ex vivo biosignatures. In today's frenetic world, consumers are becoming ever more demanding: they want to control every aspect of their lives and look for options specifically tailored to their individual needs. In many cases, suppliers are catering to these new demands; as a result, clothing, food, social media, fitness and banking services are all being democratized to the individual. Healthcare provision has finally caught up to this trend and is currently being rebooted to offer personalized solutions, while simultaneously creating a more effective, scalable and cost-effective system for all. The desire for personalization, home monitoring and treatment, and provision of care in remote locations or in emerging and impoverished nations that lack a fixed infrastructure, is leading to the realization that mobile technology might be the best candidate for achieving these goals. A combination of several technological, healthcare and financial factors are driving this trend to create a new healthcare model that stresses preventative "health-care" rather than "sick-care", and a shift from volume to value. Mobile healthcare (mhealth), which could also be termed the "internet of people", refers to the integration of sensors and smartphones to gather and interpret clinical data from patients in real-time. Most importantly, with an ageing population suffering multiple morbidities, mhealth could provide healthcare solutions to enhance chronically ill patients' quality of life.

Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to Improving Diagnosis in Health Care, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. Improving Diagnosis in Health Care a continuation of the landmark Institute of Medicine reports To Err Is Human (2000) and Crossing the Quality Chasm (2001) finds that diagnosis-and, in particular, the occurrence of diagnostic errors"has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of Improving Diagnosis in Health Care contribute to the growing momentum for change in this crucial area of health care quality and safety.

This timely analysis spotlights the concepts and possibilities of the Patient-Centered Medical Home for bringing mental health and other specialties into primary care. Overview chapters present the Patient-Centered Medical Home model, emphasizing how such systems are organized to solve widespread problems with accessibility, affordability, efficiency, and safety. Practitioner roles, boundaries, and opportunities plus applications are clarified, as

well as staffing, financial, and technological challenges. And the section on applications describe care models for special populations, such as comprehensive services to the seriously mentally ill and behavioral services to patients with chronic health conditions. Included in the coverage: Integrated care and specialty behavioral health care in the patient-centered medical home. Training the behavioral health workforce for the patient-centered medical home. The importance of stepped care protocols for the redesign of behavioral health care in patient-centered medical homes. Depression management in the medical home. Treating obesity in a primary care setting. Integrating behavioral health in the pediatric medical home. For health and clinical psychologists, primary care and family physicians, and public health professionals, Integrated Primary and Behavioral Care represents the potential for an exciting new frontier in primary care reform.

Tackling One Health from a multi-disciplinary perspective, this book offers in-depth insight into how our health and the health of every living creature and our ecosystem are all inextricably connected. Presents critical population health topics, written by an international group of experts Addresses the technical aspects of the subject Offers potential policy solutions to help mitigate current threats and prevent additional threats from occurring
