Tourists climb the Eiffel Tower to see Paris. Parisians know that to really see the city you must descend into the metro. In this revelatory book, Marc Auge takes readers below Paris in a work that is both an ethnography of the city and a personal narrative. Guiding us through history, memory, and physical space, Auge juxtaposes the romance of the metro with the reality of multiethnic urban France. His work is part autobiography, with impressions from a lifetime riding the trains; part meditation on self and memory reflected in the people and places underneath Paris; part analysis of a place where the third world and the first world meet, where remnants of cultures move and press together; and part a reflection on anthropology in an era of globalization and urban development. Although he is a pillar of French thought, In the Metro is Auge's first major critical and creative work translated into English. It shows him to be firmly rooted in a tradition of literary ethnography that reaches back to Claude Levi-Strauss and Michel de Certeau, but also engaged in current theoretical debates in literary and cultural studies. In Auge's idiosyncratic and innovative approach, the act of observing the quotidian is elevated to an art. The writer and his history become part of the field he observes, and anthropology interacts with a site -- urban life -- usually reserved for sociology and cultural studies. Throughout, Auge reveals a passion for his milieu, seeing the metro as a place rich with history and literature -- an eclectic egalitarian society.

SCIENCE AND EMPIRES: FROM THE INTERNATIONAL COLLOQUIUM TO THE BOOK Patrick PETIT,JEAN, Catherine JAMI and Anne Marie MOULIN The International Colloquium "Science and Empires - Historical Studies about Scientific De velopment and European Expansion" is the product of an International Colloquium, "Sciences and Empires - A Comparative History of Scient ific Exchanges: European Expansion and Scientific Development in Asian, African, American and Oceanian Countries". Organized by the REHSEIS group (Research on Epistemology and History of Exact Sciences and Scientific Institutions) of CNRS (National Center for Scientific Research), the colloquium was held from 3 to 6 April 1990 in the UNESCO building in Paris. This colloquium was an idea of Professor Rozhdi Rashed who initiated this field of studies in France some years ago, and proposed "Sciences and Empires" as one of the main reserach programmes for the The project to organize such a colloquium was a bit REHSEIS group. of a gamble. Its subject, reflected in the title "Sciences and Empires", is not a currently-accepted sub-discipline of the history of science; rather, it refers to a set of questions which found autonomy only recently. The terminology was strongly debated by the participants and, as is frequently suggested in this book, awaits fuller clarification.

Eighty per cent of the world's gross domestic product belongs to the 1 billion people living in the developed world; the remaining 20 per cent is shared by the 5 billion people living in developing countries. Failure to address this inequality predicament will ensure that social justice and better living conditions for all people remain elusive, and that communities, countries and regions remain vulnerable to social, political and economic upheaval. This report traces trends and patterns in economic and non-economic aspects of inequality and examines their causes and consequences. It focuses on the traditional aspects of inequality, such as the distribution of income and wealth, as well as inequalities in health, education, and opportunities for social and political participation. The report also analyses the impact of structural adjustment, market reforms, globalization and privatization on economic and social indicators. The Report identifies four areas of particular importance. First, worldwide asymmetries deriving from globalization need to be redressed. Second, the goal of reducing inequality must be explicitly incorporated in policies and programmes aimed at poverty reduction. Third, priority must be given to expanding and improving opportunities for employment. Finally, social integration and cohesion must be promoted as key to development, peace and security.

A novel. A field manual. A novel field manual.

Peter Gosselin predicted in High Wire that the American worker would take on an exceedingly high level of risk in the American economy, and would be ever more exposed to the volatility of the market. Today, Gosselin's worst fears have been realized. American families are walking a high wire in which a medical crisis, a natural disaster, or the loss of a job could send them into free fall. And as the housing crisis worsens and banks and insurers collapse, many have already fallen. High Wire reveals the quiet corrosion of American living standards and shows how the " ownership society " has turned into the " on-your-own society " —with devastating consequences.

This book contains all refereed papers that were accepted to the third edition of the " Complex Systems Design & Management " (CSD&M 2012) international conference that took place in Paris (France) from December 12-14, 2012. (Website: http://www.csdm2012.csdm.fr) These proceedings cover the most recent trends in the emerging field of complex systems sciences & practices from an industrial and academic perspective, including the main industrial domains (transport, defense & security, electronics, energy & environment, e-services), scientific & technical topics (systems fundamentals, systems architecture& engineering, systems metrics & quality, systemic tools) and system types (transportation systems, embedded systems, software & information systems, systems of systems, artificial ecosystems). The CSD&M 2012 conference is organized under the guidance of the CESAMES non-profit organization (http://www.cesames.net).

The TCGOV 2005 international conference on e-government was held at the Free University of Bozen-Bolzano during March 2 – 4, 2005. The conference was initiated by the working group " Towards Electronic Democracy " (TED) of the European Science Foundation and was jointly organized by the Free University ofBozen-Bolzano,theMunicipalityofBozen-Bolzano,theTEDWorkingGroup, and the IFIP Working Group 8.5. The conference addressed a large spectrum of issues that are relevant and have to be investigated for a successful transition from the traditional form of government to a new form known as e-government. The main focus was on the following topics: – improving citizen participation and policy making (e-democracy) – government application integration – semantic Web technologies for e-government – security aspects for e-government services Two sessions were dedicated to e-democracy, an emerging area within- government that seeks to enhance democratic processes and provide increased opportunities for individuals and communities to be involved in governmental decisions.Thecontributionsofthesetwosessionscovermorefundamentalresults and insights as well as experiences from dif erent countries. Another focus was on government application integration and the use of - mantic Web technologies, which are important technical aspects on the agenda of e-government research. Dif erent architectures for the integration and orch- tration of distributed services and processes were presented along with two case studies. Three papers about Semantic Web technologies discussed the use of ontologies in e-government.

An Introduction to Applied and Environmental Geophysics, 2nd Edition, describes the rapidly developing field of near-surface geophysics. The book covers a range of applications including mineral, hydrocarbon and groundwater exploration, and emphasises the use of geophysics in civil engineering and in environmental investigations. Following on from the international popularity of the first edition, this new, revised, and much expanded edition contains additional case histories, and descriptions of geophysical techniques not previously included in such textbooks. The level of mathematics and physics is deliberately kept to a minimum but is described qualitatively within the text. Relevant mathematical expressions are separated into boxes to supplement the text. The book is profusely illustrated with many figures, photographs and line drawings, many never previously published. Key source literature is provided in an extensive reference section; a list of web addresses for key organisations is also given in an appendix as a valuable additional resource. Covers new techniques such as Magnetic Resonance Sounding, Controlled- Source EM, shear-wave seismic refraction, and airborne gravity and EM techniques Now includes radioactivity surveying and more discussions of down-hole geophysical methods; hydrographic and Sub-Bottom Profiling surveying; and Unexploded Ordnance detection Expanded to include more forensic, archaeological, glaciological, agricultural and bio-geophysical applications Includes more information on physio-chemical properties of geological, engineering and environmental materials Takes a fully global approach Companion website with additional resources available at www.wiley.com/go/reynolds/introduction2e Accessible core textbook for undergraduates as well as an ideal reference for industry professionals The second edition is ideal for students wanting a broad introduction to the subject and is also designed for practising civil and geotechnical engineers, geologists, archaeologists and environmental scientists who need an overview of modern geophysical methods relevant to their discipline. While the first edition was the first textbook to provide such a comprehensive coverage of environmental geophysics, the second edition is even more far ranging in terms of techniques, applications and case histories.

This publication highlights how public – private partnerships (PPPs) can be effective to meet Asia's growing infrastructure needs. It shows how governments and their development partners can use PPPs to promote more inclusive and sustainable growth. The study finds that successful PPP projects are predicated on well-designed contracts, a stable economy, good governance and sound regulations, and a high level of institutional capacity to handle PPPs. It is the result of a collaboration between the Asian Development Bank, the Korea Development Institute, and other experts that supported the theme chapter "Sustaining Development through Public – Private Partnership" of the Asian Development Outlook 2017 Update.
