A two-in-one text providing teaching lab students with an overview of immunology as well as a lab manual complete with current standard exercises. Section I of this book provides an overview of the immune system and immunity, and includes review questions, problem sets, case studies, inquiry-based questions, and more to provide students with a strong foundation in the field. Section II consists of twenty-two lab exercises focused on key concepts in immunology, such as antibody production, cell separation, cell function, immunoassays, Th1/Th2 cytokine detection, cell and tissue culture methods, and cell and molecular biology techniques. Appendices include safety information, suggested links and readings, and standard discipline processes, protocols, and instructions.

Hello there, immunology teachers of colleges and universities! Are you still struggling to design and develop laboratory exercises to demonstrate concepts of immunology to your undergrad and postgrad students using rabbits, guinea pigs and mice without a good animal house? All your problems are over. Here is an innovative and 'easy to follow' laboratory manual which has the procedures of many immunological techniques and assays using fish model. Using fish model is mainly to avoid the constraints of having and maintaining spacious air-conditioned animal house and animals like rabbits, guinea pigs and mice which are traditionally used for immunology laboratory exercises. Fishes have most of the immunological components, mechanisms and molecules found in higher vertebrates like rabbits, guinea pigs and mice though in a simpler style. Hence, fish is as an ideal vertebrate model for teaching and demonstrating the essential immunological concepts. The immunological exercises covered in this manual includes but not restricted to the basic techniques like dissection of lymphoid organs, preparation of leucocytes from these organs, antigen preparation, immunization and bleeding technique, and serum separation and assays like non-specific immune mechanisms like lysozyme activity and production of reactive oxygen by phagocytes, specific immune responses like antibody production, allograft rejection and DTH reaction, expression of immune related genes and vaccination and vaccine efficacy testing. Many of these techniques are being routinely used in institutions where the author served and also in institutions whose faculty fellows underwent training in the large number of training workshops conducted by the author.

As enrollments in immunology courses continue to expand, so do the calls for up-to-date, professional lab manuals. "Immunology: A Laboratory Manual brings together a variety of methods that provide an experimental foundation for the study of immunology. Its wide range of experiments don't require sophisticated equipment or materials and can be tied easily to most immunology texts.

The Manual of Immunological Methods represents the collaboration of the Canadian Network of Toxicology Centers, a non-profit network of university-based scientists dedicated to research, training, risk assessment, and communication. This manual provides detailed immunological methods that can be utilized by researchers or practitioners who want to

Practical Immunology is a basic text aimed at immunology students and researchers at all levels who need a comprehensive overview of the methodology of immunology. The rapid and startling innovations in immunology over the past two decades have their root in sound experimental practice and it has always been the aim of this book to educate researchers in the design and performance of complex techniques. It will appeal to students of immunology, graduate students embarking on bench science, or specialised immunologists who need to use an immunological technique outside their sphere of expertise. The definitive lab "bench book". A one stop resource. Techniques explained from first principles. Basic forms of apparatus described in detail. Totally revised with new user friendly layout to aid use in the lab. Includes useful hints and tips.

Introduces new material that reflects the significant advances and developments in the field of clinical laboratory immunology. • Provides a comprehensive and practical approach to the procedures underlying clinical immunology testing. • Emphasizes molecular techniques used in the field of laboratory immunology. • Updates existing chapters and adds significant new material detailing molecular techniques used in the field. • Presents guidelines for selecting the best procedures for specific situations and discusses alternative procedures. • Covers aspects of immunology related disciplines such as allergy, autoimmune diseases, cancers, and transplantation immunology.

Lab Manual is intended to be a handy reference for undergraduate and postgraduate students in life science and allied fields. The book covers fundamental exercises as well as advanced protocols, along with authentic explanation of various techniques and precautions pertaining to common errors in the laboratory. It is a complete instruction manual that imparts knowledge on principles, protocols and applications on techniques of biochemistry, immunology and biotechnology accurately in a user-friendly style.
