The varied programme encompasses many of the key issues facing infection prevention and control teams, regulators, clinicians, policymakers and organisations, not just in the UK and Europe but across the globe. There is time allocated on the programme to allow delegates to view the exhibitions stands and network with industry colleagues.

Approximately 1 in 30 hospital patients develops a health care-associated infection (HAI) on any given day, and about 70,000 individuals die as a direct or indirect result of such infections each year. And the impact goes beyond hospitals and even beyond health care--these infections carry a significant financial burden, especially in low- and middle-income nations. In the United States, treating patients who develop HAIs costs billions of dollars annually. These stark facts underscore the need for a strong and consistent infection prevention and control program in every type of health care setting. Because an organization's ability to prevent and control infection is inextricably linked to its physical environment, a thoughtfully managed environment is a crucial piece in the infection prevention and control puzzle. The fourth edition of the best-selling Infection Control and Prevention Issues in the Environment of Care is designed to help infection preventionists, other infection prevention and control practitioners, and physical environment professionals collaborate to design, improve, and manage an infection prevention and control program that will protect patients, staff, and visitors from the threat of infection. This edition explores the keys to maintaining a safe, infection-free environment, which includes reducing and controlling environmental hazards and risks. It examines various infection risks, both in the United States and abroad, that can be minimized or eradicated through proper management of the physical environment. Topics new to the fourth edition include infection prevention and control and environment of care components of the compounding pharmacy, fogging for room decontamination, and establishing water management programs that are environmentally sustainable, among others"--Publisher's description

According to estimates from the Centers for Disease Control and Prevention (CDC), approximately 2 million patients in the United States acquire a healthcare-associated infection in the hospital each year, and about 90,000 of these patients die because of their infection. Infections are also a complication of care in other settings including long term care organizations, clinics, and dialysis centers. Infection Prevention and Control Issues in the Environment of Care, Second Edition continues to address unique infection control issues for all health care settings by helping organizations do the following: Explore the connection between Joint Commission IC and EC standards Conduct risk assessments before, during, and after construction Focus on personnel/staff issues Tackle equipment and environmental services needs Address utility maintenance and use Focus on life-threatening emergency management issues Use PIP/M to track data on these issues This important book helps keep your infection preventionist and environment of care professionals connected to areas that could affect your organizations' prevention efforts.

Dr. Kaye and Dr. Dhor have assembled top experts to write about clinical management of infections in Part II of their two issues devoted to Infection Prevention and Control in Healthcare. Articles in this issue are devoted to: CLABSI; UTI; Tuberculosis; Ventilator-Assisted Pneumonia; Surgical Site Infection; MRSA; VRE; Gram-Negative Bacilli; Fungal Infections; C. Difficile, and Emerging Infections including Ebola. Infectious Disease physicians and anyone in the hospital setting will find this issue very useful, as state-of-the-art clinical reviews provide clinical management on these common and emerging infections.

Infection Prevention and Control in Healthcare, Part I: Facility Planning, An Issue of Infectious Disease Clinics of North America, E-Book

Addresses infection prevention and control issues in a variety of health care settings. This workbook takes an organization through the most challenging infection prevention and control related issues facing infection preventionists and health care organizations.

Biofilms in Infection and Disease Control: A Healthcare Handbook outlines the scientific evidence and rationale for the prevention of infection, the role biofilms play in infection control, and the issues concerning their resistance to antimicrobials. This book provides practical guidance for healthcare and infection control professionals, as well as students, for preventing and controlling infection. Biofilms are the most common mode of bacterial growth in nature. Highly resistant to antibiotics and antimicrobials, biofilms are the source of more than 65 percent of health care associated infections (HCAI), which, according to the WHO, affect 1.4 million people annually. Biofilms are involved in 80 percent of all microbial infections in the body, including those associated with medical devices such as catheters, endotracheal tubes, joint prostheses, and heart valves. Biofilms are also the principle causes of infections of the middle-ear, dental caries, gingivitis, prostatitis and cystic fibrosis. Importantly, biofilms also significantly delay wound healing and reduce antimicrobial efficiency in at-risk or infected skin wounds. Provides specific procedures for controlling and preventing infection Includes case studies of HCAI, and identifies appropriate treatments Presents national government standards for infection prevention and control Includes extensive references and links to websites for further information

IC Made Easy: Your Key to Understanding Infection Prevention and Control is just that it makes the complex topic of infection prevention and control easy to understand for beginners as well for those who need a refresher and/or reference to the basic concepts. IC Made Easy is a basic, practical guide for infection preventionists, clinicians, accreditation professionals, and other health care professionals who need to understand how to comply with Joint Commission Infection Prevention and Control (IC) standards and related requirements including National Patient Safety Goals and Leadership and Environment of Care standards. This book also briefly covers comparable Joint Commission International (JCI) infection prevention and control requirements. It provides an overview of the entire accreditation process, which is useful for those new to either Joint Commission or JCI accreditation. In addition to accreditation requirements, the book delves into critical IC topics key issues that all health care professionals must understand beyond the need for accreditation compliance"--Publisher's description.

"This updated version of a JCR best-seller, developed and co-published in partnership with the Association for Professionals in Infection Control and Epidemiology (APIC), addresses infection prevention and control in all types of health care settings. The book discusses and clarifies Joint Commission requirements for infection prevention and control and offers a wealth of tools for organizations to assess and improve their infection prevention and control activities. Edited by infection prevention and control experts Barbara Moore Soule and Kathleen Meshan Arias, and written by a host of practitioners, the workbook format encourages organizations to develop action plans to address infection control issues found in the self-assessment. This new edition features updated chapters and tools, including new chapters on implementing a successful surveillance program; infection prevention and control priorities in ambulatory health care; cleaning, disinfection, and sterilization of equipment, devices, and supplies, and much more"--Publisher's description.
