Hyperandrogenism

Hyperandrogenism probably has an impact on fertility in addition to anovulation. Many studies suggest a decreased conception rate in spite of induced ovulation, and some suggest an increased risk for spontaneous miscarriage in hyperandrogenic women. [

This syndrome is characterized by development of cysts (i. e. sac-like structure, usually filled with fluid) on the ovaries due to ovarian follicles malfunction (Pic. 3). It affects 9 – 18% of women in reproductive age and causes hyperandrogenism (being its most common cause) and infertility. The etiology is still poorly known.

Hyperandrogenism, whether of ovarian or adrenal etiology, can be associated with impairment of folliculogenesis, resulting in anovulation. Various therapeutic modalities can be utilized to reestablish ovulation, including correction of the underlying pathophysiology, the use of fertility-promoting drugs and surgery.

Causes of hyperandrogenism is polycystic ovarian syndrome (PCOS), the development of cysts on the ovaries as a result of malfunctioning ovarian follicles.

Fertility Treatment for Hyperandrogenism - Houston, TX

A common cause of hyperandrogenism is Polycystic Ovary Syndrome (PCOS) where the ovaries produce excesses of male hormone and do not ovulate regularly. This condition is also a common cause of infertility. If adrenal abnormalities have been ruled out, treatment of excess hair growth is usually hormonal. In patients with PCOS, a new technique known as "ovarian drilling" is used to reduce the

Hyperandrogenism - Causes of Female Infertility ...

Hyperandrogenism is a medical condition characterized by high levels of androgens in females. Symptoms may include acne, seborrhea, hair loss on the scalp, increased body or facial hair, and infrequent or absent menstruation. Complications may include high blood cholesterol. The cause in about 70% of cases is polycystic ovary syndrome. Other causes include adrenal hyperplasia, Cushing's disease, certain types of cancers, and certain medications. Diagnosis often involves blood tests for

Polycystic ovarian syndrome (PCOS) is the most common endocrine disorder in women of reproductive age, associated with chronic anovulation and hyperandrogenism. The cause of PCOS is multifactorial and the mechanism is still unclear. A number of complications are closely related with PCOS such as infertility, hairy and obesity.

Polycystic Ovarian Syndrome and Female Infertility

Disruption of the insulin receptor (IR) specifically in gonadotrophs partially restored fertility, indicating that insulin signaling in the gonadotroph plays a role in the reproductive abnormalities seen in obesity-induced infertility (3).
