Integrated Design and Operation of Water Treatment ...

Integrated design is a comprehensive holistic approach to design which brings together specialisms usually considered separately. It attempts to take into consideration all the factors and modulations necessary to a decision making process. A few examples are the following: Design of a building which considers whole building design including architecture, structural engineering, passive solar building design and HVAC. The approach may also integrate building lifecycle management and a greater co

In this paper, the design and operation characteristics of the integrated system for 100t/a-scale DME synthesis from corncob were described. Pyrolysis/gasification of 45–50 kg/h corncob to bio-syngas, followed by catalytic conversion of syngas to DME over Cu/Zn/Al/HZSM-5 catalysts in a fixed-bed tubular reactor was carried out to obtain ...

The integrated approach, as discussed by Baillie 1, can not only help a proper failure analysis identify the root cause but also help improve pump design and operation, leading to better project economics. Figure 1 shows how integrated learnings from previous pump designs, operations, failure analysis, and input from multidisciplinary teams during the well life cycle, can help boost project economics.

In this paper, an integrated design is presented for sensorless control using the third-harmonic back-Electromagnetic force (EMF). Finite element (FE) method is used to integrally design the machine considering electromagnetism, temperature, and rotor structure strength, and the optimum rotor and stator structures are determined to obtain sufficient third-harmonic back-EMF for sensorless control.
