~~List of MS-DOS commands, switches and parameters~~

Command line syntax. The wt command line accepts two types of values: options and commands. Options are a list of flags and other parameters that can control the behavior of the wt command line as a whole. Commands provide the action, or list of actions separated by semicolons, that should be implemented. If no command is specified, then the command is assumed to be new-tab by default.

Volume - This parameter allows you to specify a drive letter or volume name so that the chkdsk utility can

scan the target drive/folder.

~~All Chkdsk Commands and How to Use them~~

Load a file with configuration options that will be added to the command-line options. Note that the order is important. For example, if we have a config.txt file that contains -cclock 1000 and we specify command line -cclock 1100 -config config.txt, the options from the config.txt file will take precedence and the resulting -cclock will be 1000.
