The Dirac ...

The Dirac equation is one of the two factors, and is conventionally taken to be $\gamma^0 \gamma^i = 0$ (31)

Making the standard substitution, $\gamma^i = \alpha^i$ we then have the usual covariant form of the Dirac equation $(\gamma^\mu \partial_\mu + m) \psi = 0$ (32) where $\gamma^\mu = (\gamma^0, \gamma^i)$

Dirac equation for an electron moving in an arbitrary electromagnetic field can be written in many ways. In Dirac's original papers it is written as.

$$\gamma_0 (p_0 + e c A_0) + \gamma_1 (p_1 + e c A_1) + \gamma_2 (p_2 + e c A_2) + \gamma_3 (p_3 + e c A_3) + \gamma_4 m c = 0$$
