The skin paddle position over the muscle will depend on the location of the neck/oral defect. The skin paddle illustrated in this ...

Pectoralis myocutaneous pedicle flap - AO Foundation

The pectoralis major myocutaneous (PMMC) flap has always been considered the workhorse flap for oral, head, and neck reconstruction. In 1979, Ariyan was the first to describe the use of the PMMC flap in head and neck reconstruction.

Pectoralis Major Myocutaneous Flap | Pocket Dentistry

The pectoralis major myocutaneous flap and myofascial flap variation are utilized in a large variety of head and neck reconstructive procedures that can include coverage of mucosal and/or cutaneous defects.

Pectoralis Major Myocutaneous Flap and Myofascial Flap ...

Both the major arteries were enclosed within the muscle's fascial envelope. A technique for developing a standard pectoralis major myocutaneous island flap is described. Our studies show that a hemichest flap incorporating all the skin of the chest over the muscle is feasible.

The vascular anatomy of the pectoralis major myocutaneous flap

Introduction The pectoralis major myocutaneous flap for reconstruction was first described in 1968. Its application in the head and neck region, however, was not reported until Ariyan's publication in 1979. The reliability and versatility of this flap were subsequently confirmed by many other reports.

Pectoralis Major Flap | Plastic Surgery Key

Although the pectoralis major myocutaneous flap is often used in head and neck reconstruction, the extension of the skin paddle beyond the inferior limits of the muscle has not been well described. We aim to clarify the design and application of this extended flap in head and neck reconstruction.
