Abstract. Within democratic societies, counter-terrorism is almost exclusively about crime prevention. A broad and holistic approach to preventing terrorism can be based on nine preventive mechanisms: building normative barriers against terrorism, reducing radicalisation and recruitment, deterrence, disruption, incapacitation, protecting vulnerable targets, reducing benefits to terrorists, reducing harm, and facilitating disengagement from terrorism.

Traditional "schools" of crime prevention, like the criminal justice model, social crime prevention or situational crime prevention, have proved to be too narrow and do not combine well with other approaches. However, each of these models provides important insights and contributions for reducing crime. By extracting the main preventive mechanisms of these diverse approaches, this book develops a

more holistic, general model that consists of nine preventive mechanisms: building normative barriers to crime, reducing recruitment, deterrence, disruption, incapacitation, protecting vulnerable targets, reducing benefits of crime, reducing harm, and facilitating desistance. The measures to activate the preventive mechanisms may differ according to the type of crime, as may the actors in charge of implementing the relevant measures. However, Tore Bjørge demonstrates how his model of crime prevention can be effectively applied to diverse forms of crime, from domestic burglaries to criminal youth gangs and driving under the influence to organized crime and terrorism. In doing so, this important book will be of interest to scholars and students of policing, security studies and criminology, as well as practitioners and policy-makers.

This volume is a collation of articles on counter forensics practices and digital investigative methods from the perspective of crime science. The book also shares alternative dialogue on information security techniques used to protect data from unauthorised access and manipulation. Scandals such as those at OPCW and Gatwick Airport have reinforced the importance of crime science and the need to take proactive measures rather than a wait and see approach currently used by many organisations. This book proposes a new approach in dealing with cybercrime and unsociable behavior involving remote technologies using a combination of evidence-based disciplines in order to enhance cybersecurity and authorised controls. It starts by providing a rationale for combining selected disciplines to enhance cybersecurity by discussing relevant theories and highlighting the features that strengthen privacy when mixed. The essence of a holistic model is brought about by the challenge facing digital forensic professionals within environments where tested investigative practices are unable to provide satisfactory evidence and security. This book will be of interest to students, digital forensic and cyber security practitioners and policy makers. It marks a new route in the study of combined disciplines to tackle cybercrime using digital investigations and crime science.

"Risk-based policing is the latest advancement in the long history of policing innovations, where research and planning have combined to manage crime risks, prevent crime, and enhance public safety. In Risk-Based Policing the authors share case studies from different agencies to demonstrate how focusing police resources at risky places, based on smart uses of data and strong analytical work, can address the worst effects of disorder and crime while improving public safety and community relations. Topics include the role of big data; the evolution of modern policing; dealing with high-risk targets; designing, implementing, and evaluating risk-based policing strategies; and the role of multiple stakeholders in risk-based policing. Case studies explore cities such as Colorado Springs, Glendale, Newark, Kansas City, and others. The book also demonstrates how Risk Terrain Modeling (RTM) can be extended to offer a more comprehensive view of prevention and deterrence"--Provided by publisher.

Suicide Prevention: A Holistic Approach contains the selected and edited papers that were presented during the congress Suicide, Disease, Disadvantage, A Holistic Approach, organized by the International Association for Suicide Prevention, which was held in June 1995, in Venice. Suicide prevention is still sadly neglected by governments and public health authorities, despite the fact that in several Western countries suicide has become the primary cause of death among younger age groups. The selected papers express the need for a holistic viewpoint in suicide management. The subjects range from parasuicide to the role of the media, from the special type of psychotherapeutic approach required to the most recent guidelines in pharmacological treatment, from a homage to the memory of Erwin Ringel to the presentation of specific national prevention schemes. The book will be of interest to public health workers, doctors, psychologists and social workers, as well as voluntary staff and their organizations, and to all those who make suicide prevention one of their primary interests.

Crime and the fear of crime are issues high in public concern and on political agendas in most developed countries. This book takes these issues and relates them to the contribution that urban planners and participative planning processes can make in response to these problems. Its focus is thus on the extent to which crime opportunities can be prevented or reduced through the design, planning and

management of the built environment. The perspective of the book is transatlantic and comparative, not only because ideas and inspiration in this and many other fields increasingly move between countries but also because there is a great deal of relevant theoretical material and practice in both the USA and the UK which has not previously been pulled together in this systemic manner.

This text presents an international approach to the study of crime prevention. It offers an expansive overview of crime prevention initiatives and how they are applied across a wide range of themes and infractions, from conventional to non-conventional forms of crime. Based on a review of the literature, this is the first text to offer a broad, yet comprehensive, examination of how and why crime prevention has gained considerable traction as an alternative to conventional criminal justice practices of crime control in developed countries, and to provide a cross-sectional view of how crime prevention has been applied and how effective such initiatives have been. *Crime Prevention: International Perspectives, Issues, and Trends* is suitable for undergraduate students in criminology and criminal justice programs, as well as for graduates and undergraduates in special topics courses.

A complex and vulnerable contemporary society continually poses new challenges in terms of social conflict, and as crime advances, so must strategies for prevention and rehabilitation. Many facets of crime prevention and rehabilitation of offenders are public activities closely linked to other aspects of the political and social life of a region. *The Handbook of Research on Trends and Issues in Crime Prevention, Rehabilitation, and Victim Support* is a scholarly publication that examines existing knowledge on crime dynamics and the implementation of crime victims' rights. Highlighting a wide array of topics such as cyberbullying, predatory crimes, and psychological violence, this book is ideal for criminologists, forensic psychologists, psychiatrists, victim advocates, law enforcement, criminal profilers, crime analysts, therapists, rehabilitation specialists, psychologists, correctional facilities, wardens, government officials, policymakers, academicians, researchers, and students.

This second edition of the *Handbook of Crime Prevention and Community Safety* provides a completely revised and updated collection of essays focusing on the theory and practice of crime prevention and the creation of safer communities. This book is divided into five comprehensive parts: Part I, brand new to this edition, is concerned with theoretical perspectives on crime prevention and community safety. Part II considers general approaches to preventing crime, including a new chapter on the theory and practice of deterrence. Part III focuses on specific crime prevention strategies, including a new chapter on regulation for crime prevention. Part IV focuses on the prevention of specific categories of crime and the fear they generate, including new chapters on organised crime and cybercrime. Part V

considers the preventative process: the methods through which presenting problems can be analysed, responses formulated and implemented, and their effectiveness evaluated. Bringing together leading academics and practitioners from the UK, US, Australia and the Netherlands, this volume will be an invaluable reference for researchers and practitioners whose work relates to crime prevention and community safety, as well as for undergraduate and postgraduate courses in crime prevention.
