dichotomous key, to identify unknown protists. To use a dichotomous key, always start with step #1 for every organism. 1. Organism A does not have a shell, so the key tells us to go to step 3. Note, if we just skipped to. step 2 without reading where we were MEANT to go, we would mis-identify the animal. Always start.

has pseudopodia.

2.2 Activity - BIOLOGY JUNCTION

Dichotomous Key Definition. A dichotomous key is a tool created by scientists to help scientists and laypeople identify objects and organisms. Typically, a dichotomous key for identifying a particular type of object consists of a specific series of questions. When one question is answered, the key directs the user as to what question to ask next. Dichotomous keys typically stress identifying species by their scientific name, as each individual species has a unique scientific name.
