This book examines media psychology as a field of study and provides a fundamental understanding of its emergence and application. It covers various key themes such as consumer behavior, mass media and advertising, media and culture, media messages and their effects on individual and group behavior in the Indian context. It highlights the role of media psychology with reference to citizenship and pedagogy and studies the emerging concept of digital altruism. The author also discusses various research methods used in this field that help to objectively evaluate the impact of mass media messages on people and people's effect on the functioning of mass media. This comprehensive book will be useful to students and researchers of psychology, media psychology, mass-communication, consumer behavior, digital marketing,

Ever caught somebody – or yourself – checking out the content of a ‘fat’ person’s supermarket trolley? Ever wondered what lies behind this behaviour, or what it might be like to be at the receiving end of this judging gaze? Within the context of the current ‘obesity debate’, this book investigates the embodied experience of ‘being large’ from a critical psychological perspective. Using poststructuralist and feminist theories, the author explores the discourses available to and used by self-designated ‘fat’ individuals, as well as the societal power relationships that are produced by these. Using the issues of body size and ‘fat’ as an illustration, the book describes the benefits of exploring psychological and social matters from a poststructuralist perspective, and the dangers inherent in taking reductionist approaches to public health and other social issues. As such, this book should be of particular interest to anyone working within the disciplines of psychology, sociology, and health studies, as well as those involved in the study of health, gender issues and appearance.

These timely, cutting-edge articles allow instructors to bring their students real-world perspective—from a reliable source—about today's

This short book grapples with two vast questions: the nature of our minds, and our place in the wider universe. It considers how one mutually influences the development of the other. The changes and challenges that will accompany the first humans to leave Earth and travel to another planet, or even further, will not only impact our technical capabilities, but will also represent a watershed moment within our individual and collective human psychology. Many of the problems of resource use, environmental degradation, and waste or destructive processes are contained in the larger process of exploring another environment and planet. But This book also offers a shift in perspective that allows us to consider humanity from an alternative, more holistic perspective, reappraising our own minds both individually and within dynamic social processes. The Psychology of Space Exploration considers our place and purpose in the widest possible perspective, that of space exploration and the natural universe. It doesn't seek to answer these questions, but provides a perspective to explore even further.

Curiosity and Exploration: Theories and Results provides a systematic review of research on curiosity and exploration and is intended to

present theories, methods, and research findings and to compare these with other fields of psychology. The text discusses topics on various aspects of curiosity and exploration such as the historical development of curiosity research; theoretical approaches to fully explain the phenomena of curiosity and exploration; developmental perspective in the study of curiosity and exploration; and the author's summary and evaluation at the end of the book. Psychologists will find the book to be very interesting.

Rooted in analytical psychology, *The Fat Lady Sings* challenges the notion that the fat patient must change to fit into a thin world. For years we have been bombarded by warnings about the Obesity Epidemic, a concern rivaling that about terrorism. Curiously, the depth psychological literature is mostly silent about this preoccupation, its origins, meaning, and the psychotherapeutic treatment issues involved. Almost everything written about fat and being fat comes from the world of the slender. Fat people are rarely consulted about their lives, how they eat and move and live. They are too often not seen as credible, or as reliable witnesses to their own experience. *The Fat Lady Sings* is an exploration of fat and our culture, the fat complex that grips our culture, how the war on obesity is fought in the clinical setting, and how being fat is an ongoing traumatic

experience. The book grows out of the author's life as a fat woman, her work as a Jungian psychotherapist, and as a patient in analysis.

Why do we enjoy art? What inspires us to create artistic works? How can brain science help us understand our taste in art? The Psychology of Art provides an eclectic introduction to the myriad ways in which psychology can help us understand and appreciate creative activities. Exploring how we perceive everything from colour to motion, the book examines art-making as a form of human behaviour that stretches back throughout history as a constant source of inspiration, conflict and conversation. It also considers how factors such as fakery, reproduction technology and sexism influence our judgements about art. By asking what psychological science has to do with artistic appreciation, The Psychology of Art introduces the reader to new ways of thinking about how we create and consume art.

embeds within each topical chapter a lifespan approach and robust coverage of the impact of social, cultural, and economic factors in shaping women's lives around the world. It provides extensive information on women with disabilities, middle-aged and older women, and women in transnational contexts. Its up-to-date coverage reflects current scientific and social developments, including over 2,200 new references. This edition also adds several new boxed features for student engagement. In The News boxes present current, often controversial, news items to get students thinking critically about real-life applications of course topics. Get Involved boxes encourage students to actively participate in the research process. What You Can Do boxes give students applied activities to promote a more egalitarian society. Learn About the Research boxes expose students to a variety of research methods and highlight the importance of diversity in research samples by including studies of underrepresented groups.
