The quantum physical problem arises from how elementary particles at the microscopic level (quantum physics) are measured from the macroscopic instruments (classical physics). In the quantum world, an elementary particle or a collection of such particles can exist in a superposition of two or more possible states of

that allows for many new technological applications. Our computing and communication solutions will involve more and more quantum devices. These systems are not going to fully dominate in the near future, but there will be an extended period where hybrid systems of classical and quantum devices will coexist.
