Radiographic positioning guide. Radiographic Positioning of the Zygomatic Arch Fractures of the zygoma region can occur with head trauma. In fact, the zygomatic arch is one of the most commonly fractured facial bones, typically following altercations in which the patient is punched in the face.

Radiographic Positioning Guide and Techniques - CE4RT

FIG 3-4 Radiographic views. The term radiographic "projection" references the path of the central ray as it exits the x-ray tube and passes through the patient's body. For example, A denotes an anteroposterior (AP) projection and B a posteroanterior (PA) projection. In the extremities, lateral projections are similarly described by the direction of the central ray; hence, mediolateral and lateromedial projections are possible.

Radiographic positioning guide. Radiographic Positioning of the Face and Mandible This article discusses radiographic positioning of the face and mandible for the Radiologic Technologist (X-Ray Tech).

Radiographic Positioning Guide - Page 2 of 5 and ...

The terms used to describe radiographic positioning can be confusing and depend on the area being imaged. When describing the way the beam enters and exits the body or head, it is appropriate to use ventrodorsal or dorsoventral. The terms caudocranial and craniocaudal are used to describe the way the beam enters and exits a forelimb or hindlimb. Markers should always be placed to indicate patient position and/or beam direction.
