A unified approach to AI, machine learning, and control. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives when interacting with a complex, uncertain environment.

Welcome to this project. It is a tiny project where we don't do too much coding (yet) but we cooperate together to finish some tricky exercises from famous RL book Reinforcement Learning, An Introduction by Sutton. You may know that this book, especially the second version which was published last year, has no official solution manual.

The book has a nice ansatz in that it is a comprehensive review of current techniques in reinforcement learning.

However, the 1st edition is not recommended, it glances over a lot of mathematical details and displays them not very well. The 2nd edition does a way better job at this and actually shows some calculations in modern notation.
