Research in Psychology: Methods and Design: Amazon.co.uk ...

Psychology research can usually be classified as one of three major types. 1. Causal or Experimental Research . When most people think of scientific experimentation, research on cause and effect is most often brought to mind. Experiments on causal relationships investigate the effect of one or more variables on one or more outcome variables. This type of research also determines if one variable causes another variable to occur or change.

Research Methods in Psychology, MSc - Swansea University

The aim of the study is a statement of what the researcher intends to investigate. The hypothesis of the study is an idea, derived from psychological theory which contains a prediction which can be verified or disproved by some kind of investigation, usually an experiment.

Research Methods | Simply Psychology

There are three main types of psychological research: Correlational research; Descriptive research; Experimental research; The following are common research designs and data collection methods: Archival research; Case study – Although case studies are often included in 'research methods' pages, they are actually not a single research method. Case study methodology involves using a body of different research methods (e.g. interview, observation, self-report questionnaire).

Unlike other introductory texts, there is discussion of commonly misunderstood concepts such as ecological validity, the null hypothesis and the role of cross-cultural psychology studies. Qualitative research is included in the central research methods chapters as well as being highlighted in specialist chapters which cover content analysis, grounded theory, interpretative phenomenological analysis (IPA), narrative analysis, discourse analysis and how to tackle a qualitative research project.

Research in Psychology

The experimental method involves the manipulation of variables to establish cause and effect relationships. The key features are controlled methods and the random allocation of participants into controlled and experimental groups. An experiment is an investigation in which a hypothesis is scientifically tested.
