Answer

In the RNA and
Protein Synthesis

Gizmo, you will use
both DNA and RNA to
construct a protein out
of amino acids. 1.

DNA is composed of
the bases adenine
(A), cytosine (C),
guanine (G), and
thymine (T). RNA is
composed of adenine,

messages is

transcription, during which a nucleotide sequence is copied from DNA to RNA.

The next step is to join amino acids together to form a protein. The order in which amino acids are joined together determine the shape, properties, and function of a protein.
