Introducing a NEW addition to our growing library of computer science titles, Algorithm Design and Applications, by Michael T. Goodrich & Roberto Tamassia! Algorithms is a course required for all computer science majors, with a strong focus on theoretical topics. Students enter the course after gaining hands-on experience with computers, and are expected to learn how algorithms can be applied to a variety of contexts. This new book integrates application with theory. Goodrich & Tamassia believe that the best way to teach algorithmic topics is to present them in a context that is motivated from applications to uses in society, computer games, computing industry, science, engineering, and the internet. The text teaches students about designing and using algorithms, illustrating connections between topics being taught and their potential applications, increasing engagement.

This title, originally published in 1986, explores the political and economic conditions of the 1980s, and reflects the world-wide interest in industrial democracy. Each chapter analyses the main adaptations in policy, theory and experimentation that have occurred in industrial democracy in the 1980s. In particular, the role of managers is examined in depth and detail, since these personnel have been responsible for a number of recent initiatives. The themes covered are vital for all those seeking new directions in the reform of modern industrial relations in the late 1980s and into the 1990s.

This book provides simple physical models to represent the unbounded soil in time and frequency domain analysis. They do not supplant the more generally applicable rigorous methods, but rather supplement them. The physical models used consists of the following representations: cones based one-dimensional rod theory; lumped-parameter models with frequency-independent springs, dashpots, and masses; and prescribed wave patterns in the horizontal plane. The physical models thus offer a strength-of-materials approach to foundation dynamics.

The UN Global Compact complements other corporate citizenship initiatives by promoting dialogue on the relationship between business and society. At the same time it is the only truly global corporate citizenship initiative. It is not an auditable standard; indeed, it is not a standard or a code in the way that these are normally viewed. It is a set of principles through which business and the United Nations can work in partnership for global social development. For some businesses it is a simplified codification of their existing policies and management practices, but for many engagement represents a challenge and an opportunity to raise their game by aligning profitability with the common good. As the only genuinely global corporate citizenship initiative, the Global Compact draws its moral authority from the UN Secretary-General and its moral and political legitimacy from the UN as the only global political body. It can be viewed as a series of nested networks involving the Secretary-General's Office, the ILO, UNEP, UNHCHR, UNDP and UNIDO, business, NGOs and labour. It can variously be described as an international learning network, as a social network of people and organizations engaged in a global conversation, as a global public policy network, and as a multi-stakeholder dialogue. It is all of these things, but more than anything its greatest success has been in providing a convening platform for a growing global conversation about social development among a variety of actors. However the Global Compact is viewed, it is time to reflect on the first tentative steps of an initiative born in the aftermath of the Cold War, in the "triumph of global economic liberalism" and mass demonstrations against "globalisation". In its first few years, the world has experienced 9/11 and the Iraq War, not forgetting the forty or so civil wars that are ongoing at this time. Whatever is written about the UN Global Compact or its success will be tentative. But there can be some serious reflection on its aims and origins; some telling of stories of engagement; and discussion on how this initiative has quickly become an important reference point in the dialogue on global and corporate governance.
