Users who need to go beyond the graphs created by these SAS procedures can use GTL directly to design their graphs using the TEMPLATE and SGRENDER procedures. To successfully create or modify GTL templates, you need the information in this guide, which helps you understand important concepts and offers many complete code examples that illustrate frequently used features.

SAS Help Center: Introduction to the Graph Template Language

The SAS Graph Template Language (GTL) is an extension to the Output Delivery System (ODS) that enables you to create sophisticated graphics. For example, using GTL, you can generate Model-Fit plots, Distribution Plots, Comparative plots, Prediction Plots, and more. The graphics produced by GTL are generated by template definitions that control the graph format and appearance and specify the variable roles to represent in the graph display.
