Apheresis refers to an extracorporeal therapy which aims at removing pathological constituents from the patients' blood. Due to the development of new techniques as well as the discovery of novel autoimmune antibodies, it is increasingly recognized as an important therapeutic option for a variety of autoimmune-mediated neurological disorders, including multiple sclerosis, myasthenia gravis, autoimmune encephalitis, Guillain-Barré syndrome, and many others. Therapeutic plasma exchange (TPE) constitutes the standard method of apheresis for most indications, while immunoadsorption (IA) offers a more specific, low-risk alternative. Both methods aim at removing auto-antibodies from the blood. Evidence for most neurological diseases is still low. Interestingly, more recent developments suggest that apheresis is not limited to the removal of autoantibodies but may also be useful in neurodegenerative and possibly even in acute vascular disorders.

The second edition of Essential Guide to Blood Groups is a pocket-sized book containing four-color text together with schematic figures and tables. The book comprises an introduction to blood groups, followed by chapters on techniques, information on various blood groups, antibodies, quality assurance in immunohaematology, and it concludes with chapters on troubleshooting in the laboratory, and FAQs. It also covers the serology, inheritance, biochemistry and molecular genetics of the most important blood group systems.
