Textures are 2D images that are designed to influence a 3D model's appearance. Whether it's simply to add color to a model like one would paint a clay sculpture, or to govern a specific material attribute, textures can be generated and painted by hand with Blender's built-in tools. Texture mapping is a method for defining high frequency detail, surface texture, or color information on a computer-generated graphic or 3D model. The original technique was pioneered by Edwin Catmull in 1974.. Texture mapping originally referred to diffuse mapping, a method that simply mapped pixels from a texture to a 3D surface ("wrapping" the image around the object).
