Surviving a Cage of Death! ~~The Death Watch Beetle An~~ The deathwatch beetle (*Xestobium rufovillosum*) is a species of woodboring beetle that sometimes infests the structural timbers of old buildings. The adult beetle is brown and measures on average 7 mm (0.3 in) long. Eggs are laid in dark crevices in old wood inside buildings, trees, and inside tunnels left behind by previous larvae.~~

~~Deathwatch beetle - Wikipedia~~

The Deathwatch beetle is a medium-sized beetle. The larvae live in dead wood, in old trees and in buildings: their tunnelling can cause major damage to wood beams and floors, and to wooden furniture. Adults emerge during the spring, leaving holes of about 4mm across in the wood. The adults make tapping noises against the dead wood to attract mates; the females then lay their eggs in crevices in the wood.

~~Deathwatch beetle | The Wildlife Trusts~~

Deathwatch beetle, (*Xestobium rufovillosum*), an anobiid, or borer insect, of the family Anobiidae (insect order Coleoptera) that makes a ticking or clicking sound by bumping its head or jaws against the sides of the tunnels as it bores in old furniture and wood. According to superstition, the sound, actually a mating call, was believed to forecast an approaching death.

~~Deathwatch beetle | insect | Britannica~~

A wood-boring beetle whose grubs eat old hardwood structural timbers. Practically common in stately homes in which the beetle family has probably lived since they were built. Adults rarely fly, so infestations are diminishing as old buildings are either treated or demolished. The Death Watch Beetle does not like modern softwood house timbers.

~~Post advice for controlling Death Watch Beetle~~

A Deathwatch Beetle is one of a number of wood boring insects that are found in the UK which are commonly classed as ' Woodworm '. Deathwatch Beetles are chocolate brown in colour and grow to around 8mm in length making them almost 3mm longer than the most common type of woodworm being found in the UK – The Common Furniture Beetle (Anobium Punctatum).

~~What is a Deathwatch Beetle? | How to Get Rid Of...~~

Death Watch Beetle (*Xestobium rufovillosum*) is a native British insect, which naturally inhabits the dead wood of several hardwood species found in the United Kingdom. For the larvae to flourish, the heartwood is usually required to have been modified by fungal decay, making the timber more palatable.

~~Precision Treatment of Death Watch Beetle Attack - Robert...~~

The deathwatch beetle at issue here is one of only two (both being anobiids, the other being furniture beetle or woodworm – *Anobium punctatum*) able to cause structural problems. If the building has been reasonably well maintained, damage is likely to be historic, with only outer sapwood edges and exposed beam ends affected locally.

~~Should we fear the deathwatch beetle? - Country Life~~

Deathwatch Beetle frass looks like cream bun shaped pellets (see red circled area). These will also feel gritty when rubbed between your fingers. The emergence holes are around 3mm and as you can see in the picture there is plenty of tunnelling.

~~Woodworm and Deathwatch beetle identification - Complete...~~

Here is the sound a Deathwatch beetle (*Xestobium rufovillosum*) makes when trying to attract a mate. Prefers European hardwoods like oak, that has been modified by timber decay. The emergence holes...

~~Deathwatch beetle Sound - YouTube~~

The Death Watch woodworm beetle is a wood boring beetle approximately 7 mm long with larvae growing up to 11mm long. To attract mates, these woodborers create a tapping or ticking sound that can be heard in old building rafters during quiet summer nights.

~~Woodworm Beetle - Common Woodworm Beetles found in the UK~~

A Deathwatch beetle infests old oak timbers that have been previously affected by fungal decay – specifically the oak-rot fungus *Donkiopora expansa*. So the key to removing, or preventing, an...

~~How can I get rid of deathwatch beetle? - Telegraph~~

Death Watch Beetle in damp or wet wood, especially in embedded timber beams and joists sitting in or on a wet wall, because it also kills wood rotting fungi, like Wet Rot and Dry Rot.

~~Death Watch Beetle Treatment - Woodworm~~

Deathwatch Beetle is named after the wood-boring beetle which tunnels through structural timbers of old buildings.

~~Death Watch Beetle, A Historical Post WWII Spy Thriller...~~

Death Watch Beetle A medium-sized wood-boring beetle (scientific name *Xestobium rufovillosum*), Death Watch beetle is a notorious pest as larvae can cause major damage to wood beams and floors in buildings and to wooden furniture. The death watch beetle is common and widespread in southern England, but less common in the North.

~~Death Watch Beetle - Glossary - Home Buyers Survey...~~

Death Watch Beetle sounds so terrible but in fact it is not a serious as a Longhorn Beetle infestation. Death Watch Beetle is relatively common in Southern England, whereas the North of England and Scotland are largely unaffected. It tends to infest hardwoods such as elm and oak.

~~DIY Woodworm Treatment Advice and Diagnosis | How to Deal...~~

Deathwatch Beetle have a variegated appearance as a result of having patches of ' yellowish ' hairs. In keeping with other varieties of woodworm, Deathwatch Beetles emerge from timber during what is known as the emergence period which tends to be from mid-March through to the end of June. What damage is caused by Death Watch Beetle?

~~Damage to a barn conversion in Kent caused by Death Watch...~~

The Death-Watch is now generally known to be m<relj a Hmail beetle. Indeed it is nothing more than the creature that perforates the round holes in old "worm-eaten" furniture and wood-work. The " ticking" is produced by striking the head against the wood.
