How to Make Salt Prints. Step 1: Mix a 2 percent salt solution (e.g. 20 g of sea salt for 1 liter of water) and fill it into a shallow tray. Float a sheet of paper on the surface like this: Step 2: When the edges of the paper curl upwards, grab one corner and slowly peel the paper away from the water's surface.

Instruction Manuals - Salter

The salt print was the dominant paper-based photographic process for producing positive prints from 1839 until approximately 1860. The salted paper technique was created in the mid-1830s by English scientist and inventor Henry Fox Talbot. He made what he called "sensitive paper" for "photogenic drawing" by wetting a sheet of writing paper with a weak solution of ordinary table salt, blotting and drying it, then brushing one side with a strong solution of silver nitrate. This produced a tenacious
