By January 2015 the world ' s richest 80 people had as much wealth as the poorest 50 per cent of the world ' s population. It is a global unevenness through which the barriers to in-migration of Third World migrants to wealthy First World nations go ever higher, while the barriers to travel in the reverse direction are all but extinct. So how exactly does tourism contribute to narrowing this glaring inequality between the rich and poor? Are ever-expanding tourism markets a smoke-free, socioculturally sensitive form of human industrialisation? Is alternative tourism really a credible lever for reducing global inequality and eliminating poverty? Tourism and Sustainability critically explores the most significant universal geopolitical norms of the last half century – development, globalisation and sustainability – and through the lens of new forms of tourism demonstrates how we can better get to grips with the rapidly changing new global order. The fourth edition has been extensively revised and updated, and benefits from the addition of new material on climate change and tourism. Drawing on a range of examples from across the Third World, Mowforth and Munt expertly illustrate the social, economic and environmental conditions that continue to affect the tourism industry. With the first edition hailed by Geoffrey Wall as ‘ one of the most significant books produced on tourism [since the turn of the millennium] ’ , Tourism and Sustainability remains the essential resource for students of human geography, environmental sciences and studies, politics, development studies, anthropology and business studies as well as tourism itself.

First published in 2003. Routledge is an imprint of Taylor & Francis, an informa company.

Tourism Development and the Environment: Beyond Sustainability? challenges the sustainable tourism development paradigm that has come to dominate both theoretical and practical approaches to tourism development over the last two decades. It extends the sustainable tourism debate beyond the arguably managerialist 'blueprint' and destination-focused approach that continues to characterise even the most recent 'sustainability' agenda within tourism development. Reviewing the evolution of the sustainable tourism development concept, its contemporary manifestations in academic literature and policy developments and processes, the author compares its limitations to prevailing political-economic, socio-cultural and environmental contexts. He then proposes alternative approaches to tourism development which, nevertheless, retain environmental sustainability as a prerequisite of tourism development. This book also acts as an introduction to the Earthscan series Tourism, Environment and Development. About the series: 'Tourism, Environment and Development' aims to explore, within a variety of contexts, the developmental role of tourism as it relates explicitly to its environmental consequences.

Each book will review critically and challenge 'traditional' perspectives on (sustainable) tourism development, exploring new approaches that reflect contemporary economic, socio-cultural and political contexts.

Technology, Globalization, and Sustainable Development offers a unified, transdisciplinary approach for transforming the industrial state in order to promote sustainable development. The authors present a deep analysis of the ways that industrial states – both developed and developing – are currently unsustainable and how economic and social welfare are related to the environment, to public health and safety, and to earning capacity and meaningful and rewarding employment. The authors offer multipurpose solutions to the sustainability challenge that integrate industrial development, employment, technology, environment, national and international law, trade, finance, and public and worker health and safety. The authors present a compelling wake-up call that warns of the collision course set between the current paths of continued growth and inevitable unsustainability in the world today. Offering clear examples and real solutions, this textbook illustrates how the driving forces that are currently promoting unsustainability can be refocused and redesigned to reverse course and improve the state of the world. This book is essential reading for those teaching and studying sustainable development and the critical roles of the economy, employment, and the environment.

Distinguishing between sustainable development and sustainable tourism, the authors examine whether, and in what form, tourism can contribute to sustainable development and growth. Focusing on different types of tourism appropriate to particular situations, the team of leading contributors draws on examples from around the world - Canada, USA, Spain, Belgium, UK, Australia - to explore tourism's contribution to the economic, social, political and environmental advancement of developing countries and the importance of tourism in industrialised nations. This book examines the new policies and initiatives established by both the private sector and the state to pursue sustainable tourism growth and identifies the opportunities and challenges inherent in achieving it.

Tourism is widely considered to be an important factor in socio-economic development, particularly in less developed countries. However, despite almost universal recognition of tourism's development potential, the extent to which economic and social progress is linked to the growth of a country's tourism sector remains the subject of intense debate. *Tourism and Development in the Developing World* offers a thorough overview of the tourism-development relationship. Focusing specifically on the less developed world and drawing on contemporary case studies, this updated second edition questions widely-held assumptions on the role of tourism in development and seeks to highlight the challenges faced by destinations seeking to achieve development through tourism. The introductory chapter establishes the foundation for the book, exploring the meaning and objectives of development, reviewing theoretical perspectives on the developmental process, and assessing the reasons why less developed countries are attracted to tourism as a development option. The concept of sustainable development, as the most widely adopted contemporary model of development, is then introduced and its links with tourism critically assessed. Subsequent chapters explore the key issues associated with tourism and development, including the rise of globalization; the tourism planning and development process; the relationship between tourism and communities within which it is developed; the management implications of trends in the demand for and uptake of tourism; and an analysis of the consequences of tourism development for destination environments, economies and societies. A new chapter considers the challenges of climate change, sustainability of resource supply (oil, water and food), global economic instability, political instability and changing demographics. Finally, the issues raised throughout the book are drawn together in a concluding chapter that assesses the tourism and development 'dilemma'. Combining an overview of essential concepts, theories and knowledge with an analysis of contemporary issues and debates in tourism and development, this new edition will be an invaluable resource for those investigating tourism issues in developing countries. The book will be of interest to students of tourism,

development, geography and area studies, international relations and politics, and sociology.

## Table of contents

The 2020 edition analyses tourism performance and policy trends across 51 OECD countries and partner economies. It highlights the need for coherent and comprehensive approaches to tourism policy making, and the significance of the tourism economy, with data covering domestic, inbound and outbound tourism, enterprises and employment, and internal tourism consumption.

This comprehensive volume comprises some of the best scholarship on sustainable tourism in recent years, demonstrating the rich body of past research that provides a fertile and critical ground for studies on the Sustainable Development Goals (SDGs) by tourism geographers and other social scientists in the future. Since the turn of the 1990s many international development and policy-making organisations have perceived the tourism industry, with its local and regional connections, as a high-potential tool for putting sustainable development into practice. The capacity of tourism to work for sustainable development was highlighted in relation to the United Nations' SDGs, which were adopted in 2015. The SDGs define the agenda for global development to 2030 by addressing pertinent challenges such as poverty, inequality, climate change, environmental degradation, and peace and justice. Tourism geographers and allied disciplines have held strong and long-term interest in sustainability issues, and their chapters in this collection contribute significantly to this emerging and highly policy-relevant research field. This book was originally published as an online special issue of the journal *Tourism Geographies*.

This book takes inventory of and evaluates the available resources for the development of alternative tourism in Turkey. It examines the role of alternative tourism in future tourism development plans and proposes public policies necessary to assure sustainability. Although tourism started later in Turkey than in the Western Mediterranean countries it has grown very rapidly during the last three decades and today the country ranks among the top ten countries in the world in terms of both arrivals and receipts. However, most of the tourism development has been in the mass tourism sector or the so-called sun-sea-sand tourism. While crucial for the economic development of Turkey, mass tourism, in the absence of proper planning, has happened in a haphazard manner leading to numerous environmental and socio-cultural problems. This book argues that, in order to mitigate these problems, Turkey should encourage the development of alternative forms of tourism.
