Medicaid spent \$15 billion on outpatient prescription drugs (PD) in FY 2007. Instead of directly purchasing PD, state Medicaid programs reimburse pharmacies for dispensing them to Medicaid beneficiaries. For certain PD, state Medicaid programs may only receive fed. matching funds for reimbursement up to a maximum amount known as a federal upper limit (FUL). The Deficit Reduction Act of 2005 changed the methodology for calculating FULs. This report found that if AMP-based

FULs had been in place in the 2nd qtr. of 2008, they would have been lower than avg. retail pharmacy costs for most of the drugs in the sample and in the nat. aggregate. However, 64 drugs had at least one therapeutically equivalent version with acquisition costs below the FUL. Illus.

Diagnosis Related Group (DRG) systems were introduced in Europe to increase the transparency of services provided by hospitals and to incentivise greater efficiency in the use of resources invested in acute hospitals. In many countries, these systems were also designed to contribute to improving - or at least protecting - the quality of care. After more than a decade of experience with using DRGs in Europe, this book considers whether the extensive use of DRGs has contributed towards achieving these objectives. Written by authors with extensive experience of these systems, this book is a product of the EuroDRG project and constitutes an important resource for health policy-makers and researchers from Europe and beyond. The book is intended to contribute to the emergence of a 'common language' that will facilitate communication between researchers and policy-makers interested in improving the functioning and resourcing of the acute hospital sector. The book includes: A clearly structured introduction to the main 'building blocks' of DRG systems An overview of key issues related to DRGs including their impact on efficiency, quality, unintended effects and technological innovation in health care 12 country chapters - Austria, England, Estonia, Finland, France, Germany, Ireland, the Netherlands, Poland, Portugal, Spain and Sweden

federal matching funds that states receive to reimburse pharmacies are limited by federal upper limits (FULs). In 2010, the Patient Protection and Affordable Care Act (PPACA) modified the FUL formula to better reflect pharmacy acquisition costs and thus more effectively control Medicaid expenditures. However, the Centers for Medicare & Medicaid Services (CMS) has not yet implemented the PPACA formula and continues to use FULs that were published in Sept. 2009. CMS currently publishes draft PPACA-based FULs. CMS also recently created the Nat. Average Drug Acquisition Costs (NADACs) for states to consider when setting reimbursement rates. This report (1) describes how CMS develops the NADACs and (2) examines how PPACA-based FULs compare to the NADACs. Tables and figures. This is a print on demand report.

The Complete Review for the Pharmacy Technician provides baseline knowledge for new community and health-system pharmacy technicians, an overview of important concepts for students entering technician education programs, and a concise and current review of practice-based issues for experienced technicians. In addition, the text covers information needed to understand the knowledge areas in the new Pharmacy Technician Certification Examination (PTCE). Based on the most recent PTCE content outline, the chapters span every subject area covered on the exam.
