This title was first published in 2002: Veterinary Drugs provides comprehensive coverage of commercially available animal pharmaceuticals and pesticides. Over 700 unique veterinary agents are recorded along with their chemical structures and exhaustive listings of product trade names and manufacturers. The drug compounds are organized by therapeutic category, allowing all drugs with a particular function to be reviewed and compared quickly and easily. Each main entry includes the following information: the commonly adopted chemical name, three internationally used identifiers of the compound (CAS, EINECS and Merck), and other synonyms and systematic names. The drug's physical properties and acute toxicity, along with its known biological activity and FDA-labeled applications are summarized. Each entry also includes a detailed listing of the trade names of all animal health products containing the drug along with the product's manufacturer and its NADA (New Animal Drug Application) number. A key feature of Veterinary Drugs is its extensive indexing. Appendixes include a CAS Registry Number index; a European Inventory of Existing Commercial and Chemical Substances (EINECS) number index; an index of NADA numbers; and a master index containing over 9,000 names and synonyms. A detailed directory of addresses, websites and phone numbers for animal drug manufacturers and suppliers provides convenient contact information. This reference will be an invaluable companion for animal and livestock veterinarians, pharmaceutical researchers, government food and drug regulators, food safety and public health specialists and biologists who, starting with a single synonym or trade name for a veterinary agent, will be able to quickly find a thumbnail sketch of essential information.

Veterinary Drugs provides comprehensive coverage of commercially available animal pharmaceuticals and pesticides. This title was first published in 2000: Drugs play an important role throughout the world. In industrialized countries where a formal approval process governs the introduction of new medicinal agents, thousands of chemicals are in use as drugs. This book provides a detailed picture of this marketplace. Grouped by their medicinal use and biological activity, 8,000 drugs in common use around the world are described. For each, the chemical name and a list of trade names and synonyms are provided; the CAS Registry Number and the European Inventory of Existing Chemical Substances (EINECS) Number are given; the physical properties of each compound are described, and the known biological activity and indicated applications are presented. Indexes, including a master index of name and synonyms, are appended. This compendium should be valuable to physicians, research chemists, biologists and the lay public who, with a single synonym for a drug, will be able to quickly find a thumbnail sketch of the essential information concerning the agent

The safety of fresh meat continues to be a major concern for consumers. As a result, there has been a wealth of research on identifying and controlling hazards at all stages in the supply chain. Improving the Safety of Fresh Meat reviews this research and its implications for the meat industry. Part I discusses identifying and managing hazards on the farm. There are chapters on the prevalence and detection of pathogens and on chemical and other contaminants. A number of chapters also discuss ways of controlling such hazards in the farm environment. Part II of the book reviews the identification and control of hazards during and after slaughter. There are chapters on both contamination risks and how they can best be managed. The book also discusses the range of decontamination techniques available to meat processors as well as such areas as packaging and storage. With its distinguished editor and international team of contributors, Improving the Safety of Fresh Meat will be a standard reference for the meat industry.

This latest version of Information Resources in Toxicology (IRT) continues a tradition established in 1982 with the publication of the first edition in presenting an extensive itemization, review, and commentary on the information infrastructure of the field. This book is a unique wide-ranging, international, annotated bibliography and compendium of major resources in toxicology and allied fields such as environmental and occupational health, chemical safety, and risk assessment. Thoroughly updated, the current edition analyzes technological changes and is rife with online tools and links to Web sites. IRT-IV is highly structured, providing easy access to its information. Among the "hot topics covered are Disaster Preparedness and Management, Nanotechnology, Omics, the Precautionary Principle, Risk Assessment, and Biological, Chemical and Radioactive Terrorism and Warfare are among the designated. • International in scope, with contributions from over 30 countries • Numerous key references and relevant Web links • Concise narratives about toxicologic sub-disciplines • Valuable appendices such as the IUPAC Glossary of Terms in Toxicology • Authored by experts in their respective sub-disciplines within toxicology
