The Vistech CS chart was first introduced in 1984.27 and contains circular photographic plates of sine wave gratings arranged in five rows (spatial frequencies 1.5, 3, 6, 12 and 18 cycles per degree (cpd)) and nine columns (contrast levels).

The usefulness of Vistech and FACT contrast sensitivity ...
The Vistech Chart (Vistech Consultants, Dayton, OH) consists of 5 rows and 9 columns of circular grating patches, each of which subtend 1.4 ° of visual angle when viewed from a distance of 10 feet. Each row presents a single spatial frequency.

Vistech Chart - nsaidalliance.com
The Vistech was confirmed as providing poorly repeatable data. The FACT chart, likely because of a smaller step size, showed slightly better retest agreement. However, the reduced range of scores on the chart due to the smaller step size led to ceiling (post-LASIK) and floor (cataract) effects. Thes ...

Vistech VCTS 6000 and 6500 Contrast Sensitivity Tests There are two Vistech CS tests; model 6000 is used to test near (i.e., reading distance) sensitivity at 40 cm (16 in), and model 6500 tests far sensitivity (3.05 m = 10 ft). Both tests use charts with 5 rows of sine-wave gratings.

VisTech.Projects
Each chart contains five rows and nine columns of circular photographic plates (disc) on gray background. Each row has different spatial frequency (1.5 to 18 c.p.d. at three meters) and contrast within the row reduces from left to right. The gratings are presented in three orientations: vertical 90 degrees, 15 degrees clockwise or anticlockwise.

VISTEC
Apart from a few limitations, the reference method Mesotest II as well as Optovist and the Vistech chart are suitable for testing contrast vision sensitivity, whereas Rodatest 302 and Mars charts cannot be recommended based on the current criteria for minimum requirements.

Kontrastsehen messen: mesopisch oder photopisch ...
ABSTRACT: The aim of the study was to measure the reliability of the Vistech VCTS 6500 charts, in test score units, in order to allow clinicians to derive estimates of what constitutes a clinically meaningful change in performance over time. The reliability of a more familiar test, Bailey-Lovie high contrast visual acuity, was also measured to provide a comparison.
