Water and the California Dream: Historic Choices for ...

The California Dream is the psychological motivation to gain fast wealth or fame in a new land. As a result of the California Gold Rush after 1849, California's name became indelibly connected with the Gold Rush, and fast success in a new world became known as the "California Dream". California was perceived as a place of new beginnings, where great wealth could reward hard work and good luck.

California Dream—Wikipedia

Author David Carle's updated book, Water and the California Dream, provides information on the diversion, transportation, ,and distribution of water to Southern California from the Eastern High Sierra,Colorado River, and the Feather River. It is a fair assesment of the past and gives some hope for the future.

Amazon.com: Customer reviews: Water and the California ...

A dream featuring smooth flowing water, such as a calm ocean or sea represents peace and harmony within; You are experiencing inner calm, comfort or are feeling content. Turbulent flowing water in a dream, such as tidal waves or floods, can suggest that there is some chaos in your life, or you are feeling inundated, pressured or overwhelmed in some area of your life.

Did You Dream About Water Last Night? | Everyday Health

A dream that features clean and clear water implies purity of our feelings. The dream speaks of a peaceful life, or a currently relaxed state. Swimming in calm waters such as a canal or a sea means good luck in your life.

What Are the Meanings of Dreaming of Water—5 steps

Dreams about water are not unusual. Water is a symbol of life and regeneration and without it we wouldn ' t be alive. Water symbolic meaning is very strong and important so dreams about water carry a lot of value. Dream about drowning in deep water

Dreams About Water—Interpretation and Meaning

In dreams, water is often associated with emotions and their expression. The surface of the water represents the dividing line between the consciousness and the unconscious. The type, shape, motion, and other characteristics of the dreamed water express the dreamer's conscious or unconscious emotions.

Book: ' Water and the California Dream ' . From Sierra Club Books: Sierra Club Books announced the reissue of David Carle ' s " Water and the California Dream: Choices for the New Millennium " (ISBN 978-1-57805-095-6, \$16.95 paperback). Carle, a retired California state park ranger, is the author or coauthor of other books, including " Introduction to Water in California," " Traveling the 38th Parallel: A Water Line Around the World " and " Mono Lake Basin. " .

A 1940s-era California Dreamer, a 1950s-era California Dreamer, and a 1960s-era California Dreamer, all by the artist Robert Rauschenberg, at the Los Angeles Contemporary Exhibitions in Los Angeles, California, 1965. The California Dreamer series was a response to the California Dream, a 1950s-era California Dreamer, and a 1960s-era California Dreamer, all by the artist Robert Rauschenberg, at the Los Angeles Contemporary Exhibitions in Los Angeles, California, 1965.

A vivid, searching journey into California's capture of water and soil--the epic story of a people's defiance of nature and the wonders, and ruin, it has wrought Mark Arax is from a family of Central Valley farmers, a writer with deep ties to the land who has watched the battles over water intensify even as California lurches from drought to flood and back again. In The Dreamt Land, he travels the state to explore the one-of-a-kind distribution system, built in the 1940s, '50s and '60s, that is straining to keep up with California's relentless growth. The Dreamt Land weaves reportage, history and memoir to confront the "Golden State" myth in riveting fashion. No other chronicler of the West has so deeply delved into the empires of agriculture that drink so much of the water. The nation's biggest farmers--the nut king, grape king and citrus queen--tell their story here for the first time. Arax, the native son, is persistent and tough as he treks from desert to delta, mountain to valley. What he finds is hard earned, awe-inspiring, tragic and revelatory. In the end, his compassion for the land becomes an elegy to the dream that created California and now threatens to undo it.

A 1940s-era California Dreamer, a 1950s-era California Dreamer, and a 1960s-era California Dreamer, all by the artist Robert Rauschenberg, at the Los Angeles Contemporary Exhibitions in Los Angeles, California, 1965. The California Dreamer series was a response to the California Dream, a 1950s-era California Dreamer, and a 1960s-era California Dreamer, all by the artist Robert Rauschenberg, at the Los Angeles Contemporary Exhibitions in Los Angeles, California, 1965.

In the last one hundred years, imported water has transformed the environment of the Golden State and its quality of life, with land ownership patterns and real estate boosterism dramatically altering both urban and rural communities. The key to this transformation has been expanded access to water from the Eastern Sierra, the Colorado River, and Northern California rivers. "Whoever brings the water, brings the people," wrote engineer William Mulholland, under whose leadership the process of growth through irrigation began. Now, using first – person voices of Californians to reveal the resulting changes, author David Carle concludes that it may be time to stop drowning the California dream of the good life with imported water. Using oral histories, contemporary newspaper articles, and autobiographies, Carle explores the historic changes in California, showing how imported water has shaped the pattern of population growth in the state. Because water choices remain the primary tool for shaping California's future, Carle also argues that it is possible to improve both the state's damaged environment and the quality of life if Californians will step out of this historic pattern and embrace limited water supplies as a fact of life in this naturally dry region.

A 1940s-era California Dreamer, a 1950s-era California Dreamer, and a 1960s-era California Dreamer, all by the artist Robert Rauschenberg, at the Los Angeles Contemporary Exhibitions in Los Angeles, California, 1965. The California Dreamer series was a response to the California Dream, a 1950s-era California Dreamer, and a 1960s-era California Dreamer, all by the artist Robert Rauschenberg, at the Los Angeles Contemporary Exhibitions in Los Angeles, California, 1965.

This thoroughly engaging, concise book tells the story of California's most precious resource, tracing the journey of water in the state from the atmosphere to the snowpack to our faucets and foods. Along the way, we learn much about California itself as the book describes its rivers, lakes, wetlands, dams, and aqueducts and discusses the role of water in agriculture, the environment, and politics. Essential reading in a state facing the future with an overextended water supply, this fascinating book shows that, for all Californians, every drop counts. New to this updated edition: * Additional maps, figures, and photos * Expanded coverage of potential impacts to precipitation, snowpack, and water supply from climate change * Updated information about the struggle for water management and potential solutions * New content about sustainable groundwater use and regulation, desalination, water recycling, stormwater capture, and current proposals for water storage and diversion *Additional table summarizing water sources for 360 California cities and towns

Kevin Starr is the foremost chronicler of the California dream and indeed one of the finest narrative historians writing today on any subject. The first two installments of his monumental cultural history, "Americans and the California Dream," have been hailed as "mature, well-proportioned and marvelously diverse (and diverting)" (The New York Times Book Review) and "rich in detail and alive with interesting, and sometimes incredible people" (Los Angeles Times). Now, in Material Dreams, Starr turns to one of the most vibrant decades in the Golden State's history, the 1920s, when some two million Americans migrated to California, the vast majority settling in or around Los Angeles. In a lively and eminently readable narrative, Starr reveals how Los Angeles arose almost defiantly on a site lacking many of the advantages required for urban development, creating itself out of sheer will, the Great Gatsby of American cities. He describes how William Ellsworth Smyth, the Peter the Hermit of the Irrigation Crusade, the self-educated, Irish engineer William Mulholland (who built the main aquaducts to Los Angeles), and George Chaffey (who diverted the Colorado River, transforming desert into the lush Imperial Valley) brought life-supporting water to the arid South. He examines the discovery of oil, the boosters and land developers, the evangelists (such as Bob Shuler, the Methodist Savanarola of Los Angeles, and Aimee Semple McPherson), and countless other colorful figures of the period. There are also fascinating sections on the city's architecture the impact of the automobile on city planning, the Hollywood film community, the L.A. literati, and much more. By the end of the decade, Los Angeles had tripled in population and become the fifth largest city in the nation. In Material Dreams, Starr captures this explosive growth in a narrative tour de force that combines wide-ranging scholarship with captivating prose.

A 1940s-era California Dreamer, a 1950s-era California Dreamer, and a 1960s-era California Dreamer, all by the artist Robert Rauschenberg, at the Los Angeles Contemporary Exhibitions in Los Angeles, California, 1965. The California Dreamer series was a response to the California Dream, a 1950s-era California Dreamer, and a 1960s-era California Dreamer, all by the artist Robert Rauschenberg, at the Los Angeles Contemporary Exhibitions in Los Angeles, California, 1965.

As Southern California was reimagining leisure and positioning it at the center of the American Dream, African American Californians were working to make that leisure an open, inclusive reality. By occupying recreational sites and public spaces, African Americans challenged racial hierarchies and marked a space of black identity on the regional landscape and social space. In Living the California Dream Alison Rose Jefferson examines how African Americans pioneered America's "frontier of leisure" by creating communities and business projects in conjunction with their growing population in Southern California during the nation's Jim Crow era. By presenting stories of Southern California African American oceanfront and inland leisure destinations that flourished from 1910 to the 1960s, Jefferson illustrates how these places helped create leisure production, purposes, and societal encounters. Black communal practices and economic development around leisure helped define the practice and meaning of leisure for the region and the nation, confronted the emergent power politics of recreational space, and set the stage for the sites as places for remembrance of invention and public contest. Living the California Dream presents the overlooked local stories that are foundational to the national narrative of mass movement to open recreational accommodations to all Americans and to the long freedom rights struggle.

A narrative tour de force that combines wide-ranging scholarship with captivating prose, Kevin Starr's acclaimed multi-volume Americans and the California Dream is an unparalleled work of cultural history. In this volume, Starr covers the crucial postwar period--1950 to 1963--when the California we know today first burst into prominence. Starr brilliantly illuminates the dominant economic, social, and cultural forces in California in these pivotal years. In a powerful blend of telling events, colorful personalities, and insightful analyses, Starr examines such issues as the overnight creation of the postwar California suburb, the rise of Los Angeles as Super City, the reluctant emergence of San Diego as one of the largest cities in the nation, and the decline of political centrism. He explores the Silent Generation and the emergent Boomer youth cult, the Beats and the Hollywood "Rat Pack," the pervasive influence of Zen Buddhism and other Asian traditions in art and design, the rise of the University of California and the emergence of California itself as a utopia of higher education, the cooling of West Coast jazz, freeway and water projects of heroic magnitude, outdoor life and the beginnings of the environmental movement. More broadly, he shows how California not only became the most populous state in the Union, but in fact evolved into a mega-state en route to becoming the global commonwealth it is today. Golden Dreams continues an epic series that has been widely recognized for its signal contribution to the history of American culture in California. It is a book that transcends its stated subject to offer a wealth of insight into the growth of the Sun Belt and the West and indeed the dramatic transformation of America itself in these pivotal years following the Second World War.

NAMED A MOST ANTICIPATED BOOK OF 2021 BY THE MILLIONS A provocative, exhilaratingly new understanding of the United States ' most confounding metropolis—not just a great city, but a full-blown modern city-state America is obsessed with Los Angeles. And America has been thinking about Los Angeles all wrong, for decades, on repeat. Los Angeles is not just the place where the American dream hits the Pacific. (It has its own dreams.) Not just the vanishing point of America ' s western drive. (It has its own compass.) Functionally, aesthetically, even technologically, an independent territory, defined less by distinct borders than by an aura of autonomy and a sense of unfurling destiny—this is the city-state of Los Angeles. Deeply reported and researched, provocatively argued, and eloquently written, Rosecrans Baldwin's Everything Now approaches the metropolis from unexpected angles, nimbly interleaving his own voice with a chorus of others, from canonical L.A. literature to everyday citizens. Here, Octavia E. Butler and Joan Didion are in conversation with activists and astronauts, vampires and veterans. Baldwin records the stories of countless Angelenos, discovering people both upended and reborn: by disasters natural and economic, following gospels of wealth or self-help or personal destiny. The result is a story of a kaleidoscopic, vibrant nation unto itself—vastly more than its many, many parts. Baldwin ' s concept of the city-state allows us, finally, to grasp a place—Los Angeles—whose idiosyncrasies both magnify those of America, and are so fully its own. Here, space and time don ' t quite work the same as they do elsewhere, and contradictions are as stark as southern California ' s natural environment. Perhaps no better place exists to watch the United States ' s past, and its possible futures, play themselves out. Welcome to Los Angeles, the Great American City-State.

In Not So Golden State, leading environmental historian Char Miller looks below the surface of California's ecological history to expose some of its less glittering conundrums. In this necessary work, Miller asks tough questions as we stand at the edge of a human-induced natural disaster in the region and beyond. He details policy steps and missteps in public land management and examines the impact of recreation on national forests, parks, and refuges, assessing efforts to restore wild land habitat, riparian ecosystems, and endangered species. Why, during a devastating five-year drought, is the Central Valley ' s agribusiness still irrigating its fields as if it were business as usual? What ' s unusual, Miller reveals, is that northern counties rich in groundwater sell it off to make millions while draining their aquifers toward eventual mud. Why, when contemporary debate over oil and gas drilling questions reasonable practices, are extractive industries targeting Chaco Canyon National Historic Park and its ancient sites, which are of inestimable value to Native Americans? How do we begin to understand " local, " a concept of hope for modern environmentalism? After all, Miller says, what we define as local determines how we might act in its defense. To inhabit a place requires placed-based analyses, whatever the geographic scope—examinations rooted in a precise, physical reality. To make a conscientious life in a suburb, floodplain, fire zone, or coastline requires a heightened awareness of these landscapes ' past so that we can develop an intensified responsibility for their present condition and future prospects. Building a more robust sense of justice is the key to creating resilient, habitable, and equitable communities. Miller turns to Aldo Leopold ' s insight that " all history consists of successive excursions from a single starting point, " a location humans return to "again and again to organize another search for a durable scale of values. " This quest, a reflection of our ambition to know ourselves in relation to time and space, to organize our energy and structure our insights, is as inevitable as it is unending. Turning his focus to the tensions along the California coastline, Miller ponders the activities of whale watching and gazing at sea otters, thinking about the implications of the human desire to protect endangered flora and fauna, which makes the shoreline a fraught landscape and a source of endless stories about the past and present. In the Los Angeles region these connections are more obvious, given its geography. The San Gabriel Mountains rise sharply above the valleys below, offering some of the steepest relief on the planet. Three major river systems—the Santa Ana, San Gabriel, and Los Angeles—cut through the range ' s sheer canyons, carrying an astonishing amount of debris that once crashed into low-lying areas with churning force. Today the rivers are constrained by flood-control dams and channels. Major wildfires, sparked by annual drought, high heat, and fierce Santa Ana winds, move at lightning speed and force thousands to flee. The city ' s legendary smog, whose origins lie in car culture, was fueled in part by oil brought to the region's surface in the late nineteenth century. It left Angelenos gasping for breath as climatic conditions turned exhaust into a toxic ozone layer trapped by the mountains that back in the day were hard to see. Clearing the befouled skies took decades. Every bit as complex is the enduring effort to regenerate riparian health and restore wildlife habitat in a concrete-hardened landscape. The emerging tensions are similar to those threading through the U.S. Forest Service ' s management of the Angeles National Forest, exacerbated whenever a black bear ambles into a nearby subdivision. How we build ourselves into these spaces depends on the removal of competing users or uses: a historic strawberry patch gives way to a housing development, a memorial forest goes up in smoke, a small creek tells a larger tale of the human impress, and struggles over water—a perennial issue in this dry land—remind us we're not as free of the past as we'd like to think. Neither are we removed from the downward consequences of our choice to live in fire ' s path. The West does not burn every summer; it just seems that way. And not every fire is a smoke signal of distress. Picking through the region ' s fiery terrain is as tricky as trying to extinguish a roaring blaze in the August heat. There are lessons to be had by examining how we respond to the annual conflagrations. The Wallow Fire, which in 2011 burned hundreds of thousands of acres in remote Arizona, sparked equal amounts of political grandstanding and hand-wringing about wildfire-fighting strategies. Beyond the headlines and flashy, smoke-filled images lay another reality. The creation of defensible space and the thinning of forest communities—signs of homeowners' and state and federal agencies' proactive intervention—meant few structures burned during the monthlong firestorm. That such good news is rarely reported is part and parcel of another ethical dilemma too rarely acknowledged: the decision to live in fire zones should come coupled with homeowners' responsibility to do all they can to ensure their homes don't go up in smoke. How they build their homes and landscape its environs are essential steps in defending their space. That obligation comes with another, made clear in the 2013 Yarnell Hill, which took the lives of nineteen firefighters. To make our houses fire-safe is to give firefighters a fighting chance. This reciprocity and the social compact it depends on require us to believe we inhabit common ground with our neighbors, a realization that should build a stronger sense of community. But it's a tough concept to promote in a bewilderingly antisocial political environment, when budgets for fire prevention are slashed as part of larger efforts to defund the nation-state. Or when the very reasons some seek to live in isolated, mountainous environs clash with the larger need to act in concert with their communities. Fires illuminate many things, not least the ties that bind and those that are frayed. Miller develops his argument from a variety of places and perspectives. Most of the pieces ask a series of questions about a particular landscape—Gila National Forest, Death Valley, Zion, Arches, and Rocky Mountain National Parks, and a host of other iconic western scenic spots. Why do we conceive of wilderness as a preserve, separate and inviolate? Who benefits—or does not—from the idea that such landscapes are, or ought to be, untrammelled? Why has this intellectual construction, and the preservationist ethos it depends on, come to dominate contemporary environmentalism? Related queries bubble up after Miller spends time in the newest national park, Pinnacles in central California, or one of the most venerable, the Grand Canyon in northern Arizona. What impact has the long history of tourism and recreation had on these public lands? Maintaining trails that weave through the Yosemite Valley is an arduous, incessant task made more difficult by the visitors pouring in to John Muir ' s favorite terrain or rushing to rock climb in Minerva Hoyt ' s beloved Joshua Tree. Still more daunting is the prospect of sustained ecological restoration and habitat regeneration under current conditions and those that climate change is generating across the West. Once again Aldo Leopold can be a guide. " A member of a biotic team is shown by an ecological interpretation of history, " he once observed, adding that many " historical events, hitherto explained solely in terms of human enterprise, were actually biotic interactions between people and land. " Only when " the concept of land as a community really penetrates our intellectual life " will history, as a subject and methodology, become fully realized. Not So Golden State contributes powerfully toward the realization of this enduring cross-generational endeavor.

Obi Kaufmann, author of the best-selling California Field Atlas, turns his artful yet analytical attention to the Golden State's single most complex and controversial resource: water. In this new book, full-color maps unravel the braided knot of California's water infrastructure and ecosystems, exposing a history of unlimited growth in spite of finite natural resources--a history that has led to its current precarious circumstances. Yet this built world depends upon the biosphere, and in The State of Water Kaufmann argues that environmental conservation and restoration efforts are necessary not only for ethical reasons but also as a matter of human survival. Offering nine perspectives to illustrate the most pressing challenges facing California's water infrastructure, from dams to species revitalization, Kaufmann reveals pragmatic yet inspiring solutions to how water in the West can continue to support agriculture, municipalities, and the environment. Interspersed throughout with trail

paintings of animals that might yet survive under a caring and careful water ethic, Kaufmann shows how California can usher in a new era of responsible water conservation, and--perhaps most importantly--how we may do so together.
