Oil and gas companies now recognize that industrial projects in the Canadian North can only succeed if Aboriginal communities are involved in decision-making processes. Where the Rivers Meet is an ethnographic account of Sahtu Dene involvement in the environmental assessment of the Mackenzie Gas Project, a massive pipeline that, if completed, would have unprecedented effects on Aboriginal communities in the North. The book reveals that while there has been some progress in establishing avenues for Dene participation in decision making, the ultimate assessment of such projects remains rooted in non-local beliefs about the nature of the environment, the commodification of land, and the inevitability of a hydrocarbon-based economy.

West Ham and the River Lea explores the environmental and social history of London 's most populous independent suburb and its second largest river. Jim Clifford maps the migration of industry into West Ham 's marshlands and reveals the consequences for the working-class people who lived among the factories. He argues that poverty, pollution, water shortages, and disease stimulated momentum for political transformation, providing an opening for a new urban politics to emerge. This book establishes the importance of the urban environment in the development of social democracy in Greater London at the turn of the twentieth century.

For millennia, " the North " has held a powerful sway in Western culture. Long seen through contradictions—empty of life yet full of promise, populated by indigenous communities yet ripe for conquest, pristine yet marked by a long human history—it has moved to the foreground of contemporary life as the most dramatic stage for the reality of climate change. This book brings together scholars from a range of disciplines to ask key questions about the North and how we 've conceived it—and how conceiving of it in those terms has caused us to fail the region 's human and nonhuman life. Engaging questions of space, place, indigeneity, identity, nature, the environment, justice, narrative, history, and more, it offers a crucial starting point for an essential rethinking of both the idea and the reality of the North.

Local Content and Sustainable Development in Global Energy Markets analyses the topical and contentious issue of the critical intersections between local content requirements (LCRs) and the implementation of sustainable development treaties in global energy markets including Africa, Asia, Europe, North America, Latin America, South America, Australasia and the Middle East While LCRs generally aim to boost domestic value creation and economic growth, inappropriately designed LCRs could produce negative social, human rights and environmental outcomes, and a misalignment of a country's fiscal policies and global sustainable development goals. These unintended outcomes may ultimately serve as disincentive to foreign participation in a country's energy market. This book outlines the guiding principles of a sustainable and rights-based approach - focusing on transparency, accountability, gender justice and other human rights issues - to the design, application and implementation of LCRs in global energy markets to avoid misalignments.

Family's experience with Alaska pipeline.

Dwelling in Political Landscapes contributes to the anthropology of landscape and the field of political ecology. Environments change at speeds never before experienced. Massive species loss is just one transformation affecting life forms and their interactions, climate change another, and there are many more rapid and sometimes profound material and social changes that anthropologists working around the world attend to and document. By exploring how the material and conceptual are entangled in and as landscapes, this book takes up the invitation posed by such emerging novel situations to explore the potentialities of anthropology and related fields, to understand life when 'things are not what they used to be'. The complex entanglements of seemingly disconnected processes and the recent sense of crisis concerning environment, movements of people, climate change and other planetary transformations, raise the question over the role of anthropology and proper methodologies for studying these developments.
