Microsoft Windows SharePoint Services 3.0 provides security features that you as a site owner can use to help control access to and authorization on your sites. By using these security features, site owners – instead of server administrators – control who can access the site, and site owners specify what permissions are assigned to users for particular entities.

For SharePoint Server 2016 or SharePoint Server 2013, see Set up your computer to sync SharePoint Server on-premises files. Another way to use Windows Explorer to manipulate files is to open a library in Explorer. Like synced folders, this allows you to copy, move, and edit files and folders the way you do on your desktop.

Windows Server 2008 Unleashed covers the planning, design, prototype testing, implementation, migration, administration, and support of a Windows 2008 and Active Directory environment, based on more than three and a half years of early adopter experience in full production environments. This book addresses not only what is new with Windows 2008 compared to previous versions of the Windows Server product, but also what is different and how the similarities and differences affect an organization's migration to Windows 2008. Chapters are dedicated to the migration process from Windows 2000/2003 to Windows 2008, how to properly use Group Policies in Windows 2008, and tips and tricks on managing and administering a Windows 2008 environment. The authors cover the technologies new to Windows 2008, such as IPv6, Network Access Protection (NAP), Network Policy Server (NPS), Terminal Services Remote Programs, Windows Deployment Services (WDS), Hyper-V virtualization, and more! This book doesn't just describe the features and functions included in Windows 2008--there are notes throughout the book explaining how organizations have successfully used the technologies to fulfill core business needs.
